CIVIL DISTRICT COURT
PARISH OF ORLEANS
STATE OF LOUISIANA

GLORIA SCOTT AND
DEANIA JACKSON

VERSUS

THE AMERICAN TOBACCO
COMPANY, INC., ET AL.

NO. 96-8461

DIVISION "K"

DOCKET NO. 4

* * * * *

VOLUME II

Continuation of the videotaped deposition of HUGH W. LONG, Ph.D., Department of Health Systems Management and Institute for Health Services Medicine, Suite 1900, 1440 Canal Street, New Orleans, Louisiana 70112, taken in the Law offices of Adams and Reese, L.L.P., Suite 4500, One Shell Square, 701 Poydras Street, New Orleans, Louisiana 70139, commencing at 1:32 o'clock p.m., on Tuesday, the 17th day of April, 2001.

APPEARANCES:

BRUNO AND BRUNO
Attorneys at Law
(By: Joseph M. Bruno, Esquire)
825 Baronne Street
New Orleans, Louisiana 70113
(Attorneys for the Plaintiffs)

1 ADAMS AND REESE, L.L.P.

S T I P U L A T I O N

It is stipulated and agreed by and among counsel for the parties hereto that the deposition of the aforementioned witness is hereby being taken under the Louisiana Code of Civil Procedure, Article 1421, et seq., for all purposes, in accordance with law;

That the formalities of reading and signing are specifically not waived;

That the formalities of filing, sealing, and certification are specifically waived;

That all objections are reserved until trial or other use of the deposition, except those objections regarding the form of the question or the existence of a privilege.

* * * *

CHERYL FOURNET HUFFMAN, Registered Merit Reporter, in and for the Parish of Orleans, State of Louisiana, officiated in administering the oath to the witness.

HUGH W. LONG, Ph.D.,

after having been first duly sworn by the
above-mentioned Registered Merit Reporter,
did testify as follows:

EXAMINATION BY MR. BRUNO:

Q. Good afternoon, Doctor. Joe Bruno
again. It's been some time since you and I
visited:

(Whereupon a discussion was held off
the record.)

THE VIDEOGRAPHER:

Today is April 17th, 2001. This is
the videotaped deposition of Dr. Hugh W.
Long. We are going on the record at 1:32
p.m. I am John Lanford of Evidence
Management, L.L.C.

Now counsel will please notice their
appearance off camera and then the court
reporter will swear in the witness.

MR. BRUNO:

Joe Bruno for the class.

MR. STERN:

And Martin Stern for Philip Morris.

MR. BRUNO:

And do you want to swear him again?

1 THE COURT REPORTER:

2 You're still under oath, Doctor, if
3 I can remind you.

4 MR. BRUNO:

5 We could triple swear you now. I
6 mean, now I know I got you good.

7 EXAMINATION BY MR. BRUNO:

8 Q As I said, Doctor, it's been many,
9 many, many months. Would you please tell me
10 what, if anything, you have done since your
11 appearance at the last deposition for which
12 you have billed these tobacco lawyers or -- at
13 their request?

14 A. I have continued to work on the
15 matter and, in particular, have reviewed the
16 deposition transcripts of -- from Dr. Burns; I
17 have -- excuse me -- I have reviewed a series
18 of, I guess they would classify as pleadings,
19 various motions from both sides and responses
20 to motions; I have prepared an affidavit; I
21 have prepared an additional analysis of costs
22 of the proposed monitoring program; and done
23 the background research associated with that
24 work.

25 MR. BRUNO:

1 Okay. Martin, have you supplied us
2 with all the new materials he's looked at?
3 I know that you've given me this FAX dated
4 April 5. But I guess I need -- I don't
5 need you to give me the depo transcripts;
6 but if you would identify the depo
7 transcripts, that would be helpful. And
8 the pleadings, I don't need to see them,
9 just identify them for me, please.

10 MR. STERN:

11 I will be happy to do that. From
12 memory, the deposition transcripts were
13 all three days of Dr. Burns' deposition.

14 MR. BRUNO:

15 Up till completion?

16 MR. STERN:

17 Through completion.

18 MR. BRUNO:

19 All right. So I just want to make
20 it -- We agree then that you have seen the
21 entirety of Dr. Burns' deposition.

22 THE WITNESS:

23 That is what's been represented to
24 me. Three volumes.

25 MR. BRUNO:

1 That's fair. And we can leave it at
2 that, Martin.

3 THE WITNESS:

4 Okay.

5 MR. BRUNO:

6 Okay. The pleadings?

7 MR. STERN:

8 All the Daubert pleadings on Dr.
9 Burns and Dr. Long.

10 MR. BRUNO:

11 Okay. The ones you filed and the
12 ones we filed?

13 MR. STERN:

14 Correct.

15 MR. BRUNO:

16 Okay. Fair enough.

17 How about the ones on Rosen and
18 Harrison?

19 MR. STERN:

20 I don't think so. Although I think
21 that Dr. Long may have been provided the
22 Court's order on Drs. Rosen and Harrison.

23 MR. BRUNO:

24 All right. And how about the
25 affidavit?

1

MR. STERN:

2

Of who?

3

MR. BRUNO:

4

That he prepared.

5

MR. STERN:

6

That's an attachment that you have
to the motion, the Daubert motion that
defense filed against Dr. Burns.

8

9

MR. BRUNO:

10

Okay. Good. All right. And then I
guess let me show you --

11

12

THE WITNESS:

13

Let me supplement it.

14

MR. BRUNO:

15

Of course.

16

THE WITNESS:

17

There is one other deposition that I
received, which was the deposition of Dr.
Culbertson. And I also received a copy of
a report of Dr. Wecker.

18

19

20

21

MR. BRUNO:

22

Dr. who?

23

THE WITNESS:

24

Wecker.

25

MR. STERN:

1

Wecker.

2

THE WITNESS:

3

W-E-C-K-E-R, I believe.

4

MR. BRUNO:

5

You'll have to help me. That's a

6

new one on me. Have you got that one?

7

MR. STERN:

8

Wecker is the defense expert

9

statistician, I believe, by training.

10

MR. BRUNO:

11

Is that a new one?

12

MR. STERN:

13

No. It was filed back at the

14

original deadline.

15

MR. BRUNO:

16

We have your -- We haven't deposed

17

him.

18

MR. STERN:

19

You have deposed him.

20

MR. BRUNO:

21

We have?

22

MR. STERN:

23

Danny Becnel took his deposition.

24

MR. BRUNO:

25

In that case, I'm sure he was sliced

1 up like --

2 MR. STERN:

3 And Dr. Wecker has also submitted an
4 affidavit in support of the Daubert motion
5 filed with respect to Dr. Burns.

6 MR. BRUNO:

7 Okay.

8 EXAMINATION BY MR. BRUNO:

9 Q. All right. Let me show you this
10 letter with attachments, Dr. Long. And then,
11 if you would, identify the attachments as being
12 the so-called additional analysis?

13 A. (Witness reviews document.) Yes,
14 the letter is a letter to Mr. Redfearn from Mr.
15 Stern, which is Mr. Stern's --

16 Q. Work product?

17 A. -- work product.

18 Q. And attached to it?

19 A. (Witness reviews document.) I am
20 trying to remember if this last page is
21 complete.

22 Q. Well, why don't you check your
23 files and we'll see?

24 A. Well, I don't have any files with
25 me.

1 Q. Well, those were subpoenaed, so
2 they should be here.

3 A. I have not received a subpoena in
4 conjunction with today.

5 Q. You have your original subpoena
6 from the first day. This is a continuation.
7 Nothing has changed.

8 A. Well, it --

9 MR. STERN:

10 He produced that the first day.

11 THE WITNESS:

12 It may be that --

13 MR. BRUNO:

14 No, he didn't produce this the first
15 day. This is your supplement.

16 MR. STERN:

17 Well, we produced this to you in
18 advance of this deposition.

19 MR. BRUNO:

20 And he can't tell me whether or not
21 it's complete. Give me a break.

22 MR. STERN:

23 Well, can I see it?

24 THE WITNESS:

25 I'm not sure --

1 MR. BRUNO:

2 How can you tell him --

3 THE WITNESS:

4 -- whether there was an additional
5 page was FAXed or not that may have had
6 one additional reference on it.

7 MR. STERN:

8 There can't be any confusion here,
9 Joe, because you got this attached to a
10 pleading.

11 MR. BRUNO:

12 No, I didn't. I got this attached
13 to your letter.

14 MR. STERN:

15 You also got it attached to a
16 pleading, which is what I'm looking at,
17 which is the Defendants' Memorandum in
18 Opposition -- I'm sorry -- Defendants'
19 Memorandum in Support of Motion to Exclude
20 Inadmissible Opinion Testimony of Dr.
21 David Burns.

22 MR. BRUNO:

23 All right. Well, why don't you show
24 that to the witness and he can verify
25 whether it's complete?

1 MR. STERN:

2 I'd be happy to.

3 No, I stand corrected. This wasn't
4 attached to that pleading. But why don't
5 you go on and I'll be happy to see if I
6 can get a copy.

7 MR. BRUNO:

8 That would be very helpful.

9 THE WITNESS:

10 Right.

11 MR. BRUNO:

12 I just want to make sure I've got
13 everything that --

14 THE WITNESS:

15 Right.

16 MR. BRUNO:

17 Because this came last week.

18 THE WITNESS:

19 We did provide an original copy.

20 MR. BRUNO:

21 I'm sure you did to Martin, there's
22 no question about that. I just want to
23 make sure that I've got the whole thing so
24 that we can proceed.

25 Now, --

1 MR. STERN:

2 Okay. Joe, I can tell you right
3 now, if you'd like.

4 MR. BRUNO:

5 Sure.

6 MR. STERN:

7 And I think you are missing a page.
8 I think somebody left your last page off.
9 The document that you have, Joe, is the
10 same as "Exhibit 4" attached to
11 Defendants' Memorandum in Opposition to
12 Plaintiffs' Motion to Exclude the
13 Testimony of Hugh Long, Ph.D.

14 MR. BRUNO:

15 All right.

16 MR. STERN:

17 And --

18 MR. BRUNO:

19 All right. Well, just so you'll
20 know, Martin, I have in front of me a FAX
21 from Adams and Reese which indicates 20
22 pages. And the last page is 19, so I must
23 be missing one page.

24 MR. STERN:

25 Well, if it's our mistake, I

1 apologize.

2 MR. BRUNO:

3 No big deal. Just --

4 MR. STERN:

5 But this is the same --

6 MR. BRUNO:

7 Can we use that as an exhibit?

8 MR. STERN:

9 Sure.

10 MR. BRUNO:

11 All right. That probably is the
12 easiest and safest way to resolve the
13 problem. I'm going to mark this thing in
14 globe as "Long Number 3."

15 (Whereupon the document as described
16 above was marked as "Long Exhibit Number
17 3.")

18 MR. BRUNO:

19 Okay. Are you comfortable now,
20 Doctor, that we've got a complete set?

21 THE WITNESS:

22 Let me look at this one.

23 MR. BRUNO:

24 Take your time.

25 You know, that's the one problem

1 with FAXing is you never know if you got
2 a complete set or not.

3 THE WITNESS:

4 (Reviews document.)

5 MR. STERN:

6 Do you have an extra copy of that,
7 Joe, less obviously the last page?

8 MR. BRUNO:

9 Yes.

10 MR. STERN:

11 Can I use this one?

12 MR. BRUNO:

13 Sure, you can.

14 MR. STERN:

15 Okay. Thank you.

16 MR. BRUNO:

17 That's my FAX. I'm not ready to go
18 into that, anyway, Martin, if you want to
19 send it out for copying.

20 MR. STERN:

21 Okay.

22 THE WITNESS:

23 Yes, sir, this appears to be
24 complete.

25 EXAMINATION BY MR. BRUNO:

1 Q. Okay. Great.

2 All right. Now, at your last
3 deposition, you recall that you told me that
4 you were not able to provide me with an opinion
5 relative to Dr. Burns' -- and I'm going to, for
6 the lack of a better description, I'm just
7 going to call them the numbers, okay? The
8 attachments to his report. Because you didn't
9 understand the source of the numbers. Do you
10 remember that? Do you remember telling me
11 that?

12 A. Yes, with -- Are we talking about
13 Dr. Burns' spreadsheets?

14 Q. Yes.

15 A. Yes, I remember indicating that
16 for the vast majority of the numbers in that
17 spreadsheet, I did not have sources or
18 authorities either in his report or in the
19 spreadsheets themselves.

20 Q. Okay. All right. Now, --

21 MR. STERN:

22 Excuse me, Joe. What did you label
23 that exhibit just so I can --

24 MR. BRUNO:

25 "Number 3."

1 MR. STERN:

2 Okay.

3 MR. BRUNO:

4 Because we have, apparently, I'm
5 told, two exhibits from the first
6 deposition.

7 MR. STERN:

8 Okay.

9 MR. BRUNO:

10 All right?

11 EXAMINATION BY MR. BRUNO:

12 Q Now, have you had a chance to
13 review the definition of this class?

14 A I have reviewed the definition of
15 the class.

16 Q All right. And you understand that
17 the cessation program is for former smokers or
18 smokers who desire assistance in stopping
19 smoking?

20 MR. STERN:

21 Let me object to the form. I don't
22 know what that has to do with the class
23 definition.

24 MR. BRUNO:

25 That's what the definition says.

1 MR. STERN:

2 Well, the class definition is a
3 definition of the class.

4 MR. BRUNO:

5 Right.

6 MR. STERN:

7 For all purposes.

8 MR. BRUNO:

9 Okay. And your question -- So
10 what's your point?

11 MR. STERN:

12 You seem to be making a connection
13 to the cessation program that I don't
14 think is a part of the class definition,
15 but --

16 MR. BRUNO:

17 Well, it is.

18 EXAMINATION BY MR. BRUNO:

19 Q. Well, then, you tell me what's your
20 understanding of the class as it relates to
21 cessation then.

22 A. Well, the class is defined with
23 respect to both cessation and monitoring, as
24 I appreciate it.

25 Q. Right. So let's --

1 A. Not just for one or --

2 Q. No, I understand.

3 So with regard to the cessation
4 component, what is your understanding of the
5 Court's definition of the class as it relates
6 to the remedy of cessation?

7 A. The same as it is for monitoring.

8 Q. Which is what?

9 A. Which is current -- people who
10 currently or have in the past smoked, who were
11 residents of Louisiana, who were smokers as of
12 a date in, I believe, May of '96, provided that
13 they had commenced smoking sometime in 1988.

14 Q. I believe there's an "or" in there,
15 Doctor.

16 A. There are some other conditions.

17 Q. It's either you started smoking
18 before or you make some allegations of fraud.
19 Are you familiar with that?

20 A. I think there is a provision that
21 there's an "or" with respect to behavior of the
22 tobacco companies. And I can't quote to you
23 what that language is. But there is an
24 alternative prong, I believe, with respect
25 to certain behavior of the companies, of the

1 defendants.

2 Q. All right. Now, you're not an
3 expert in addiction; are you?

4 A. No, sir.

5 Q. And you're not an expert in
6 cessation?

7 A. If by "cessation" we mean the
8 medical processes of getting -- of helping
9 people quit, that's correct.

10 Q. But you do have a general under-
11 standing of addiction and smoking; don't you?
12 I mean, the same one that tobacco has indicated
13 that everybody has?

14 A. Well, I don't know what tobacco has
15 indicated.

16 Q. Okay.

17 A. But I know that there is one body
18 of thought that involves a claim of addiction
19 associated with nicotine; that the last time I
20 read general literature on that, it was still
21 being debated as to the extent to which that
22 affected everybody or just some people or what
23 the thresholds were.

24 Q. Well, do you know that tobacco
25 contends in this case that everybody in the

1 State of Louisiana who is above the age of
2 18 knows that cigarettes cause addiction?

3 MR. STERN:

4 Objection to the form. No
5 foundation.

6 EXAMINATION BY MR. BRUNO:

7 Q. Did you know that?

8 A. I do not know that from anything
9 that I have reviewed in this case.

10 Q. Okay. Well, have they shared with
11 you what exactly their position is on that
12 point?

13 A. No, sir.

14 Q. All right. Do you know or at least
15 do you have a general understanding that people
16 who regularly smoke may be addicted?

17 A. I have a general understanding that
18 some people who smoke regularly may have a
19 dependency on the nicotine that occurs in that
20 process.

21 Q. And do you know generally that
22 people who smoke have some difficulty in
23 stopping that behavior, that is, the smoking
24 behavior?

25 A. I know that some people express

1 a desire to not smoke but say they have
2 difficulty stopping.

3 Q. Right.

4 Do you also know people who have,
5 in fact, stopped but express some urge, if you
6 will, for lack of a better word, to pick up the
7 cigarette again?

8 MR. STERN:

9 You mean does Dr. Long personally
10 know such people?

11 MR. BRUNO:

12 Not personally, just in general.

13 A. Well, I guess both.

14 EXAMINATION BY MR. BRUNO:

15 Q. Sure.

16 A. I do know some people personally
17 who have stopped smoking who have said that
18 they get the urge every once in a while.

19 Q. Right.

20 A. I know some people who have stopped
21 and restarted.

22 Q. Sure.

23 A. And stopped again and restarted
24 again.

25 Q. And restarted again. Okay. All

1 right.

2 A. But, yes, I have firsthand
3 knowledge of people like that. And in the
4 general media coverage, I have read similar
5 accounts of other people or populations.

6 Q. Right.

7 Okay. And as a general sense, do
8 you know what the general medical recommenda-
9 tion is to those who have stopped smoking but
10 who feel the urge to start again? Do you know
11 that?

12 A. No, I don't.

13 Q. All right. At Tulane, do you know
14 if physicians encourage individuals who have
15 stopped smoking not to start again?

16 A. I don't know that of personal
17 knowledge. I know physicians at Tulane, the
18 ones that I know, uniformly urge people to stop
19 smoking. I don't know and have never had
20 occasion to ask or observe their telling
21 someone who has already stopped not to resume.
22 I just haven't.

23 Q. You've never heard of that?

24 A. I've just never observed that.

25 Q. That's fine. That's fine.

1 Do you think that's an unreasonable
2 thing for a physician to do?

3 A. I don't think it's unreasonable. I
4 guess it would involve some assessment or
5 knowledge by the physician of the propensity of
6 his or her patient to resume.

7 Q. Okay. Now, since you've had an
8 opportunity to review Dr. Burns' depositions,
9 have you been able to ascertain enough
10 information to allow you to conclude how it is
11 that he came to the numbers that he came to in
12 the spreadsheets relative to the exemplar
13 cessation program?

14 A. Tell me what you mean by
15 "exemplar."

16 Q. The one that's attached to his
17 report.

18 A. His cessation program?

19 Q. Right.

20 It's an example. Well, if you read
21 the deposition, he said very clearly that it
22 was an example of a cessation program. I mean,
23 do you remember that, him saying that?

24 MR. STERN:

25 Well, objection to the form.

1 EXAMINATION BY MR. BRUNO:

2 Q. Okay. Do you remember him saying
3 that or not?

4 A. I remember in his deposition his
5 often characterizing things with respect to his
6 spreadsheets as examples to the Court.

7 Q. Okay. All right. So we're on the
8 same page is all I'm saying.

9 A. (Witness nods head affirmatively.)

10 Q. Now, so what have you learned
11 about, if anything, about how he got those
12 numbers that he put forth in the exemplar
13 program?

14 A. My recollection is that I learned
15 relatively little about the numbers. What I
16 remember is his stating that his cost numbers
17 were numbers that came from his personal
18 experience with cessation programs, that is,
19 the costs of each modality or method. That
20 his differential -- I don't know whether it's
21 propensity to quit or quit rates or proportion
22 of long-term quits again were judgments which
23 he had made based on his experience and not
24 from any particular source.

25 Q. Okay.

1 A. And the other thing that I remember
2 his saying is that he had, well, first of all,
3 on its face, assumed that the current smoker
4 number that he began with, which was six
5 hundred and some thousand people was
6 coterminous with the class.

7 And the one thing I guess which
8 most surprised me was he actually put forth two
9 notions that were possibly in the alternative,
10 it wasn't clear to me, that when you -- that he
11 believed that the costs of getting people to
12 quit went up as you moved further into the
13 defined group. That did not surprise me,
14 per se.

15 Q. Right.

16 A. But that either that was such an
17 important piece of his costing that it would
18 have been simply trivial to have dealt with
19 other adjustments which he left out, such as
20 mortality in the class or differential quit
21 rates given the program.

22 Or the alternative to that, as I
23 appreciated it, was that because he didn't want
24 to or couldn't estimate that additional cost,
25 he would just leave the other things off or

1 leave the other things out kind of as an
2 offset. And that he would assume that there,
3 in some sense, were a wash.

4 Now, it was not clear to me which
5 of those two alternatives was really -- He
6 mentioned both of them and they were involved
7 in questioning. But that the fact that he
8 reduced his year-to-year class or what he was
9 going to class the target population only by
10 prevailing quit rates, not the quit rates that
11 he envisioned in the program, and did not
12 reduce the target population year to year by
13 mortality was either because those things were
14 trivial or because they were an offset to this
15 increased cost as you move farther into the
16 target population to get additional quits.

17 Q. All right. Well, let's start from
18 the beginning. You said that it did not
19 surprise you that the cost of cessation would
20 increase over time in this population; right?

21 A. What I said was that the -- it did
22 not surprise me that the costs per incremental
23 quit would increase as you moved deeper into
24 the population.

25 Q. All right.

1 A. Now, that's not --

2 Q. Why?

3 A. Okay. It seems to me to be
4 consistent with ordinary knowledge that the
5 people most motivated or most inclined to quit
6 will be the people who quit first. That's
7 early in the program. So you're not going to
8 be spending multiple years' worth of money with
9 respect to those people.

10 Q. All right. Let's talk about them,
11 if you don't mind. Forgive me for interrupting
12 but it's easier if we just kind of compartmen-
13 talize it. There is a group that you
14 recognize, even though you're not an expert in
15 this field, there are certain things that you
16 know in general about the smoking population;
17 right? That's what I'm hearing you say.

18 A. Right.

19 And, you know, I'm not sure which
20 field we're saying I'm not an expert in. But
21 there are certain economic characteristics of
22 any population that would be --

23 Q. Well, we're not talking about the
24 economic characteristics. We're talking about
25 the fact that there is a, quote, most motivated

1 group. I mean, I could be missing something
2 here, but that's not relating to their economic
3 status or their -- anything like that.

4 It's a group of people who have a
5 high degree of motivation with regard to desire
6 to quit; right?

7 A. And I would say to you, Mr. Bruno,
8 that that is part of their economic character-
9 istics. We're not talking about how much money
10 they make or that kind of economics. We're
11 talking about their propensities to behave in a
12 particular way. And economics is about
13 behavior of individuals.

14 Q. Well, all right. But I guess --
15 I don't want to quibble with you, but it just
16 seems to me that we're talking about the net
17 economic impact that results from the fact that
18 they are highly motivated, that is, it costs
19 less to get those folks to cessate than it
20 costs to get somebody who's not as highly
21 motivated; would you agree?

22 A. I would agree with that.

23 Q. All right. All I'm saying is that
24 this group of individuals is identifiable?

25 MR. STERN:

1 What do you mean by --

2 A. Well, --

3 MR. STERN:

4 Object to the form. I don't
5 understand what you mean. You mean
6 the individuals person by person?

7 MR. BRUNO:

8 "Yes" and "No."

9 EXAMINATION BY MR. BRUNO:

10 Q. I mean as a group of individuals, I
11 mean, we're talking about them as a group, so
12 that clearly means that they are identifiable,
13 they can be separated from the other groups?

14 A. Well, there's -- they are clearly
15 identifiable after the fact.

16 Q. Well, sure, yeah, because they
17 quit.

18 A. Because they quit.

19 Statistically, certainly not
20 individually, I can't point to Mr. A and
21 Mrs. B.

22 Q. Right. We can't give you their
23 names, yeah.

24 A. But statistically there is
25 certainly the potential to identify some

1 proportion of this population which we would
2 expect to quit in some fixed period of time,
3 if only based on historical experience.

4 Q. Okay. Now, and what I'm driving at
5 is with regard to this group, are you also able
6 to identify the modalities that would be most
7 appropriate with regard to assisting them with
8 their desire to quit?

9 A. I think there's two pieces to that.

10 Q. Okay.

11 A. One is, again, based on historical
12 experience. One can identify alternative
13 modalities and their relative rates of success.
14 I do not know, however, that, again, before the
15 fact, one can match differing modalities to
16 different subsets of that population and say,
17 "This method is best for people exhibiting
18 these kinds of characteristics and this method
19 is best for people displaying some alternative
20 set of characteristics."

21 Q. I don't mean what's best now. I
22 said what would be appropriate. I didn't say
23 the best, okay? Now, and I guess what I'm
24 driving at --

25 MR. STERN:

1 Wait, wait.

2 A. Well, yeah. When I used the word
3 "best," I was intending to mean efficacious,
4 what would be most efficient.

5 EXAMINATION BY MR. BRUNO:

6 Q. Right.

7 Well, for example, with regard to
8 the most motivated group, would you recognize
9 that a message, a public service or a public --
10 Withdraw.

11 What I mean is that there is a
12 message that is published through any number
13 of sources, be it the television, be it
14 advertising in magazines or the newspaper or
15 the like which simply sends the message "Don't
16 smoke." My first question is: Is that
17 recognized as a cessation modality?

18 MR. STERN:

19 Objection to the form. I'm sorry,
20 I don't understand the question.

21 MR. BRUNO:

22 Okay. I'm sorry you don't, either.

23 EXAMINATION BY MR. BRUNO:

24 Q. Doc?

25 A. When I think of cessation

1 modalities in the context of the medical care
2 system, the healthcare system, I think in terms
3 of specific interventions of the kinds that Dr.
4 Burns identifies. You know, there's counseling,
5 there's -- in person, by telephone, there's
6 clinics, there's some drug interventions,
7 et cetera.

8 Q. Right.

9 A. When I think about public health,
10 you know, activities, you know, to me, it's one
11 thing to attempt to change the behavior of a
12 population or a subset of the population, that
13 is, where you're dealing with a large number of
14 persons having particular characteristics.

15 And, certainly, we see things like
16 television advertising that tends to be
17 directed toward, for example, teenagers or
18 billboards or things like that that are trying
19 to raise a level of awareness in a population
20 that a particular behavior is dangerous or can
21 harm you.

22 And I think of those kinds of
23 programs differently than I think about the
24 one-on-one kinds of things. How does the
25 healthcare provision system interact with Mr.

1 Jones or Mrs. Smith to help them stop smoking,
2 for example, when they say, "I'd really like to
3 stop smoking. I've tried and I can't. Can you
4 help me?"

5 Q. Well, I guess I'm confused because
6 would you agree with me that the goal of the
7 cessation program is to assist people who want
8 to quit in quitting?

9 A. That would certainly be the
10 common sense goal of such a program.

11 Q. Sure.
12 And what would be the difference
13 then when you add the appellation "public
14 health"? Isn't the goal the same, that you --

15 A. I'm sorry? When you add the --

16 Q. The appellation --

17 A. Oh.

18 Q. -- the title "public health," isn't
19 your goal the same? You want that same
20 population to assist them in cessating?

21 A. I think on the public health level,
22 what you're attempting to do is motivate a
23 segment of the population to seek assistance.
24 When you start talking about cessation
25 interventions at the level of the individual,

1 then you are responding to that desire, whether
2 it was self-initiated or whether it was
3 assisted by a public awareness, public health
4 campaign.

5 Q. Well, I'm confused again because
6 the kinds of programs that you just described
7 are not programs that say, "Go get help." They
8 simply say, "Stop smoking, smoking is bad for
9 you." You know the drill here. They don't
10 say, "Go to a doctor and go buy the patch."

11 A. Well, I don't know that they never
12 say that.

13 MR. BERN:

14 Wait, wait, wait. Dr. Long, you
15 have to wait until he asks a question.

16 THE WITNESS:

17 Oh.

18 EXAMINATION BY MR. BRUNO:

19 Q. But the point is, the message is
20 that you have characterized is public health,
21 in particular, the Heart Association message --
22 I'm sure you're familiar with those -- American
23 Lung Association messages, they say, "Smoking
24 is bad for you, stop smoking." Wouldn't you
25 agree? I mean, that's the kind of message that

1 we've seen?

2 MR. STERN:

3 Object to the form. You've now
4 asked this question three times. He's
5 answered it.

6 MR. BRUNO:

7 Good. Good for you.

8 EXAMINATION BY MR. BRUNO:

9 Q. All right. Doc?

10 A. I have seen those kinds of
11 messages, yes.

12 Q. All right. And my simple point
13 is that those messages have as their goal to
14 motivate people to stop smoking?

15 A. I think that is a fair characteri-
16 zation of that advertising.

17 Q. All right. And all I'm saying is
18 that with regard to that highly motivated
19 group, this is the group that might benefit
20 from those kinds of messages; right?

21 A. Well, I would suspect that there
22 are, in the so-called highly motivated group,
23 people who are sufficiently motivated that they
24 are attempting or have, in fact, stopped
25 smoking, whether they had ever seen one of

1 those ads or not. There are others who may be
2 more susceptible to those messages, that is,
3 would change their threshold of motivation.
4 And I suspect there are people who, you know,
5 ignore it completely.

6 Q. Yeah.

7 Have you looked at the quit rates
8 over time? Now, you can remember back in the
9 sixties you didn't see very many messages out
10 there saying, "Don't smoke." And then there
11 was a period of time when they started
12 appearing on television. I mean, don't you
13 agree with me that as those messages started
14 appearing, the quit rates went up?

15 A. Well, I have not looked at the
16 data.

17 MR. STERN:

18 Object. Excuse me, Dr. Long. Let
19 me object to the form because I think it
20 -- I don't know if you mean to imply
21 cause/effect or not, so I have to object.

22 MR. BRUNO:

23 Well, I don't know.

24 EXAMINATION BY MR. BRUNO:

25 Q. But, anyway, --

1 A. I have not studied a time series of
2 quit rates.

3 Q. Okay.

4 A. I do know that there were lots of
5 messages in the public arena before the kinds
6 of advertising that we've seen most recently
7 related to Surgeon General's warnings, to
8 medical studies that get popularized in the
9 daily press.

10 Q. Right.

11 A. There were lots of things which
12 were not paid advertising that were conveying
13 this message, you know, before, say, the last
14 five years --

15 Q. Right.

16 A. -- when we've seen more of the
17 media-type advertising.

18 Q. Did I hear you say that the best
19 way to evaluate the effectiveness of a
20 particular modality is to analyze it after
21 the fact? Didn't you tell me that?

22 A. I said that we could look at a
23 track record of different modalities --

24 Q. Right.

25 A. -- and see how effective they have

1 been, yes.

2 Q. Sure.

3 Okay. So I'm wondering have you --
4 what have you done to determine whether or not
5 the publication of the message "You ought not
6 smoke because it's bad for you" has been
7 effective in assisting people in discontinuing
8 their smoking behavior?

9 A. I have not done such a study.

10 Q. Okay. All right.

11 Okay. So you certainly, therefore,
12 are not in a position to tell the jury or the
13 judge whether or not the publication of the
14 message would be an effective cessation method;
15 right?

16 A. Well, again, when I think about
17 cessation methods, I'm thinking about
18 interventions with individuals. And the media
19 notion is a population-level intervention.

20 Q. Well, but you just said you haven't
21 looked at the numbers. Let me suggest to you
22 that if you did look at those numbers and those
23 numbers would, in fact, reveal that when the
24 messages were published that the quit rates
25 increased, if that were true -- I mean, take my

1 word for it for the purpose of this question --
2 if that were true, then one could logically
3 conclude that publication of such a method
4 would be an effective method of assisting
5 people in quitting?

6 MR. STERN:

7 Object to the form. That's been
8 asked and answered. And Dr. Long has told
9 you, Joe -- and I think the Court has said
10 the same thing -- that advertising is not
11 a cessation.

12 MR. BRUNO:

13 No, that's not what the Court said.
14 You weren't in court, so you don't know
15 what he said.

16 MR. STERN:

17 I have read the Court's transcript.

18 MR. BRUNO:

19 Well, you misread them.

20 MR. STERN:

21 Well, I remember the Court saying
22 there would be no recovery for
23 advertising.

24 MR. BRUNO:

25 No. What the Court said was that

1 there would be no recovery for recruit-
2 ment, which is what the Court said.

3 MR. STERN:

4 We just have to agree to disagree
5 about that.

6 MR. BRUNO:

7 Well, that's what life is all about,
8 I guess, is disagreement. But it has no
9 place in this deposition.

10 THE WITNESS:

11 Could we have the question read
12 back?

13 MR. BRUNO:

14 That's probably a grand idea.

15 THE WITNESS:

16 I think I may have lost it by now.

17 MR. BRUNO:

18 I'm sure you did.

19 (Whereupon the preceding question
20 was read back by the court reporter.)

21 THE WITNESS:

22 Thank you.

23 THE COURT REPORTER:

24 You're welcome.

25 THE WITNESS:

1 A time coincidence, in the sense of
2 simultaneous events or closely in time,
3 does not guarantee that that is the
4 reason.

5 EXAMINATION BY MR. BRUNO:

6 Q. I didn't say that.

7 A. It doesn't establish cause and
8 effect, but --

9 Q. I didn't say that. I said assume
10 that it's true. That's all I said.

11 MR. STERN:

12 No, no, no.

13 A. You said assume that these two
14 things happened at the same time: The smoking
15 rates increased as advertising occurred.

16 EXAMINATION BY MR. BRUNO:

17 Q. No, I said assume that I'm correct.
18 I said because you haven't looked at the data,
19 I'm not going to ask you to analyze the data.
20 I'm going to ask you to assume for the sake of
21 my question that, in fact, there is a
22 connection between the publication of the
23 notice and reduced quits, okay?

24 A. So it's not just a correlation?

25 Q. No, not a correlation.

1 A. It's a causation?

2 Q. And the reason I did that is
3 purposeful. You didn't do the analysis and you
4 haven't contacted or spoken to any experts who
5 have done the analysis; correct?

6 MR. STERN:

7 Wait, wait, wait. What's the
8 question? You made a statement and
9 then you asked a different question.

10 MR. BRUNO:

11 No, I didn't ask a different
12 question.

13 MR. STERN:

14 Are we back on your hypo or you're
15 on to a new question?

16 MR. BRUNO:

17 No, we haven't left the hypo. Let
18 me do it again.

19 A. So I'm assuming that there is --

20 EXAMINATION BY MR. BRUNO:

21 Q. Yes.

22 A. You're asking me to assume there is
23 causation --

24 Q. Right.

25 A. -- between --

1 Q. The publication --

2 A. -- increasing of advertising and --

3 Q. Quit rates.

4 A. -- people actually successfully
5 quitting?

6 Q. Exactly. Exactly.

7 And, again, I make the point -- And
8 I don't want to belabor this, but I'm doing
9 that to be fair to you because just to give you
10 the -- you haven't done the analysis one way or
11 another, so that's why I'm simply saying, okay,
12 let's assume it, okay, to be true. This works.

13 If it works, then would it not be
14 an appropriate modality to be used in the
15 context of this case?

16 MR. STERN:

17 Let me object to the extent that
18 calls for a legal conclusion and to the
19 extent the doctor has already said that he
20 doesn't regard that as a smoking cessation
21 intervention.

22 You can answer the question, Dr.

23 Long.

24 MR. BRUNO:

25 That's noted.

1 A. If in your hypo that was the only
2 thing which happened --

3 EXAMINATION BY MR. BRUNO:

4 Q. What do you mean by that? Now I'm
5 confused. What do you mean the only thing that
6 happened?

7 A. Okay. If we have this media
8 campaign increase and that causes people to
9 quit --

10 Q. Right. Not all, just --

11 A. An increase in the --

12 Q. An increase, yeah.

13 A. -- the number or proportion of --

14 Q. We've got our hardcore people that
15 we haven't even talked about yet.

16 A. Right.

17 Q. We're talking about our highly,
18 obviously, our highly motivated group.

19 A. If your hypo is that we can
20 establish causation, and those people who do
21 quit quit with no other intervention, they
22 didn't chew the gum, they didn't have
23 counseling, they didn't do any of the other
24 things, if that were an absolute causative --
25 if we could establish that as a causative

1 thing, then that activity would clearly be
2 something which would achieve or help us to
3 achieve the desired end.

4 If it simply increased the
5 proportion of people who then decided that they
6 wanted to go use the gum or go see a doctor or
7 go join a smoking-cessation program or any of
8 the other specific modalities that we've talked
9 about, then by itself I would not consider it a
10 smoking cessation intervention.

11 Q. Exactly.

12 Indeed, and just so you and I can
13 be clear and fair with each other, you just
14 made the distinction between a recruitment
15 effort, that is, "Y'all come on down and try
16 our gum and our patch and our cessation
17 program" versus "You ought to quit." And those
18 who are -- And then just hearing that message
19 out there helps them or reinforces them or
20 gives them that extra little push that they
21 need to actually stop, that would be the
22 cessation message; right?

23 A. Of exclusively their own volition.

24 Q. Right.

25 Okay. And, really, the analysis is

1 the same regardless of the modality, be it the
2 patch, be it the behavioral modification? You
3 look at the particular program and you look at
4 the success rates?

5 MR. STERN:

6 Wait for a question.

7 EXAMINATION BY MR. BRUNO:

8 Q. Isn't that true?

9 MR. STERN:

10 That what would be the same?

11 A. If you --

12 MR. STERN:

13 I'm sorry. The modality would be
14 the same?

15 MR. BRUNO:

16 No, I didn't say the modality was
17 the same. Indeed, I said the modality was
18 different.

19 MR. STERN:

20 I just --

21 MR. BRUNO:

22 I'm sorry you can't keep up with
23 this. But, I mean, you know, don't
24 misstate the question.

25 MR. STERN:

1 Well, I'm asking.

2 EXAMINATION BY MR. BRUNO:

3 Q. All I'm saying is this: That we
4 agreed that the public information campaign
5 might be, if I'm correct and there is some
6 demonstrable causal link between the campaign
7 and quit rates, that would make it an
8 appropriate cessation modality?

9 And I'm simply pointing out the
10 analysis is the same for all the modalities,
11 be it the patch or be it the counseling and so
12 forth? You measure the number of folks that
13 come in, you measure the folks that come out,
14 and then you figure out how many of those folks
15 quit? It's the same kind of analysis is all
16 I'm saying?

17 A. That would be, you know, a basic
18 protocol for analyzing any intervention, yes.

19 Q. Right.

20 And for our purposes here, we don't
21 want to pay for any modality that just flat out
22 doesn't work? I mean, that would not be a good
23 way to spend money, right?

24 A. That's correct.

25 Q. All right. But with regard to what

1 you bring to the table, it is the expertise
2 that you bring, you're not -- you're not here
3 to tell the jury which of these modalities is
4 the appropriate one in a given group; right?
5 In other words, you're not here to tout
6 cessation by using the patch versus cessation
7 by using the gum versus behavioral
8 modification?

9 A. That's correct.

10 Q. All right. Now, so how do we then
11 construct a program that includes appropriate
12 modalities? How do we go about doing that?

13 A. Well, a program that for the
14 purpose of increasing smoking cessation --

15 Q. That sounds like recruitment to me.
16 That's why? -- Forgive me for interrupting
17 you.

18 A. Okay.

19 Q. Before we get way down the line,
20 let's just --

21 A. All right.

22 Q. -- we'll stop and make sure that
23 you and I are not talking at cross-purposes.

24 What you said made me think
25 increasing the number of people who would

1 participate. Is that what you meant?

2 A. What I had in mind was for whatever
3 number of people are in the class --

4 Q. Okay.

5 A. -- to increase the rate of smoking
6 cessation --

7 Q. Okay.

8 A. -- over what would occur, anyway,
9 absent additional intervention.

10 Q. Okay. Now, we're on the same page
11 then. All right. Now, so how would we do
12 that?

13 A. The -- If the question is what are
14 the components in the program --

15 Q. No, no.

16 A. -- what are the interventions --
17 You said how do we put together a program?

18 Q. Yeah.

19 I mean, you're an expert in this
20 field. And I want to know how do I construct
21 this program? What is the appropriate
22 scientific methodology, if one exists, to build
23 this program?

24 MR. STERN:

25 Objection to the form. I don't

1 understand "build the program," what
2 you're looking for.

3 EXAMINATION BY MR. BRUNO:

4 Q. Okay. Do you understand my
5 question?

6 A. Well, I may or may not. I can --

7 Q. Okay.

8 A. We will find out as I suggest the
9 piece of an answer.

10 Q. We've successfully done that all 20
11 minutes long, so I'm happy to continue on this
12 course.

13 A. I mean, as you mentioned earlier,
14 we do not wish to include things which are not
15 efficacious.

16 Q. Precisely.

17 A. We do wish to include things which
18 are efficacious.

19 Q. Right.

20 A. Knowledge of what is efficacious
21 has to do, in part, with existing modalities
22 which one can observe have, in fact, been
23 associated with successful quits.

24 Q. Okay. And where -- This is not
25 within your area of expertise? We've got to

1 consult some other experts, right, as to --

2 A. We would need to look at people who
3 have expertise in smoking cessation, delivery
4 of these programs, who would have data that
5 would say, you know, people came and used the
6 patch and this many of them actually stopped
7 smoking a year -- by a year later were still
8 off cigarettes.

9 Q. Okay. Now, do you offer in this
10 case an expert opinion as to whether or not the
11 particular programs identified in the exemplar
12 program are good or bad or inappropriate or the
13 like?

14 A. I do not.

15 Q. Okay. All right. So let's assume
16 then for the sake of our discussion that these
17 are appropriate modalities, the ones, that is,
18 the ones which are identified in the exemplar
19 program. What is the next step that we should
20 go through to determine what money would be
21 necessary to fund such a program over the
22 course of one year?

23 A. Well, the next step is to identify
24 what would need to occur that would increase
25 the effectiveness of these interventions and/or

1 to find new interventions perhaps not currently
2 being used.

3 Q. Okay.

4 A. That is, what is it -- If we were
5 talking about the patch, for example, and, you
6 know, ten people out of a hundred who used the
7 patch really do quit, what is it that you could
8 do so that fifteen out of a hundred people who
9 used the patch would quit? In other words,
10 what intervention, further intervention beyond
11 the existence of the modality would get you
12 better results than you're already getting?

13 Q. Got you.

14 Would that relate in any way to
15 what Dr. Sarah Moody-Thomas refers to as
16 adherence or retention?

17 A. I think it would relate to both of
18 those things.

19 Q. Okay.

20 A. You know, it is, you know, who
21 shows up.

22 Q. Right.

23 A. You know, "A" wants to quit --

24 Q. Right.

25 A. -- "B" wants to try this modality,

1 "C" continues to use this modality, "D" is
2 successful --

3 Q. Got you.

4 A. -- in using this modality.

5 Q. All right. So, all right, how do
6 we go about doing that? How do we determine --
7 Do we go to the patch makers or the scientists
8 who know about the patch?

9 MR. STERN:

10 To do what?

11 MR. BRUNO:

12 To do what the doctor just suggested
13 we needed to do in the first place, which
14 was to assess the effectiveness of that
15 modality.

16 A. Well, I'm assuming that each of the
17 modalities is effective in the way that we've
18 already described.

19 EXAMINATION BY MR. BRUNO:

20 Q. Right.

21 You said to improve the
22 effectiveness.

23 A. To improve the effectiveness --

24 Q. Right.

25 A. -- I'm sure it will be some

1 different set of steps for each modality.

2 In the case where we're using some
3 sort of a product, it may, in fact, involve
4 product design or modification to make it more
5 user friendly or attractive or whatever. In
6 the case of services that don't involve a
7 product, such as counseling, it may be a
8 question of accessibility, training of
9 personnel.

10 I mean, it's going to clearly be
11 different kinds of things with respect to
12 different modalities.

13 Q Okay. All right. Well, how do we
14 determine the cost? How do we figure that out?

15 MR. STERN:

16 You mean for the -- what you're
17 calling the exemplar cessation program?

18 MR. BRUNO:

19 No. The cost of what the doc and I
20 are building, which is our own program.

21 MR. STERN:

22 Well, Joe, you're building it. The
23 doctor is talking about costs. But I
24 don't --

25 MR. BRUNO:

1 Yes.

2 MR. STERN:

3 I mean, you're improperly
4 characterizing his testimony when you say
5 he's building a program.

6 MR. BRUNO:

7 No, I'm not incorrectly character-
8 izing his testimony. Not in the least.

9 EXAMINATION BY MR. BRUNO:

10 Q. We've just described the fact that
11 if we were going to do this, we would identify
12 the modalities. You've agreed with me that
13 that's outside of your field of expertise. So
14 I've asked you to assume -- understand that
15 it's an assumption -- that the modalities
16 identified in the Burns exemplar program are
17 the right ones.

18 So the next step is, all right,
19 what do we do next? And you said that what we
20 want to do is try to figure out, one, what can
21 we do to improve their effectiveness; and, two,
22 we need to explore whether there might be some
23 new interventions out there; right?

24 A. I would presume that there is
25 somewhere in the medical and public health

1 community research going on that would be
2 looking for additional ways of helping people
3 stop smoking.

4 Q. Okay.

5 A. And if there has been such
6 research, then, you know, it would -- If a new
7 modality has been proven empirically, then it
8 certainly would be eligible for inclusion in
9 such a program.

10 Q. Yes.

11 Now, this is your area. This is
12 your field of expertise; is it not? I mean,
13 that is the business of the economic
14 considerations of -- that would drive things
15 like this research that you just talked about,
16 that's a subject about which you have
17 expertise?

18 MR. STERN:

19 Objection to the form.

20 EXAMINATION BY MR. BRUNO:

21 Q. Right?

22 A. I'm not sure what you mean by
23 driving the research.

24 Q. Well, you just made an interesting
25 point to me. And you said if the research

1 exists or if anybody is doing it; right?

2 A. Yes.

3 Q. All right. The fact of life in
4 this country is that somebody is only going to
5 do it if somebody else is paying for it; right?

6 A. Or if somebody believes that they
7 will get a payoff in the future, they may be
8 paying for it themselves.

9 Q. Right.

10 Well, the point is it's
11 economically driven?

12 A. In --

13 MR. STERN:

14 Wait for a question. Wait for a
15 question.

16 EXAMINATION BY MR. BRUNO:

17 Q. Isn't that true? Please.

18 A. There are two basic scenarios in
19 which this could occur. One might be the
20 thirst for new knowledge, in which case there
21 could be public sector funding, such as
22 National Institutes of Health or National
23 Science Foundation or whatever. It could be
24 a profit motivation. A pharmaceutical company
25 engages in activity because it thinks there's a

1 reasonable prospect of a profit somewhere down
2 the line in the future.

3 Q. Right.

4 And my only point is it's more
5 basic than dividing the source of the money?
6 If there's no income source -- I shouldn't say
7 income source. If there's no source of money,
8 the research is not going to happen using both
9 scenarios? If there's no public sector
10 financing and if there is no perceived profit
11 motive, the research just doesn't happen; isn't
12 that true?

13 A. As a general proposition, I think
14 that would be correct.

15 Q. All right. So that in the case of
16 modalities with regard to cessation, I mean, to
17 bring it home, either, A., there has to be a
18 public funding source for research as to
19 improved or more effective cessation methods;
20 correct? Or there has to be a company out
21 there who believes that if they develop this
22 method, they might be able to sell it to the
23 public and derive a profit therefrom; right?

24 A. I think those would be the two most
25 likely scenarios.

1 Q. Okay. All right.

2 MR. STERN:

3 Can we take a bathroom break, Joe?

4 MR. BRUNO:

5 Of course. Any time.

6 THE VIDEOGRAPHER:

7 We're going off the record at 2:30.

8 (Whereupon a brief recess was taken
9 at this time from 2:30 o'clock p.m. to
10 2:37 o'clock p.m.)

11 THE VIDEOGRAPHER:

12 We're going back on the record at
13 2:37.

14 MR. BRUNO:

15 Okay. What was the last question?

16 (Whereupon the testimony on Page
17 341, Line 15 through Page 341, Line 25 was
18 read back by the court reporter.)

19 EXAMINATION BY MR. BRUNO:

20 Q. All right. And the final question
21 in that line is just because there's no funding
22 doesn't mean that the research is not important
23 and necessary? I'm sorry. Just because
24 there's no funding, it doesn't mean that the
25 research may not be important and necessary?

1 A. The judgment about important or
2 necessary is made by funding sources. And they
3 will fund that research they believe to be
4 important and necessary.

5 Q. Well, what public funding is there
6 for new cessation modalities?

7 A. I have no idea.

8 Q. Okay. And what research do you
9 know of that private industry is undertaking
10 for the determination of new cessation
11 modalities?

12 A. I'm sure that's proprietary. And
13 I don't know what's currently underway.

14 Q. But you would agree that it is
15 important and necessary to have research to
16 find new cessation modalities; correct?

17 A. I think what I've said is that
18 research deemed to be important and necessary
19 will be funded.

20 Q. All right. So that doesn't answer
21 the question.

22 Do you agree or disagree that there
23 should be research to identify new cessation
24 modalities, regardless of whether it's being
25 funded or not?

1 A. I have no opinion about that.

2 Q. Why not? You just told me a few
3 moments ago that the two things that we want to
4 look at were to -- whether to seek methods of
5 increasing the effectiveness of the modality,
6 and the second thing you said was to look for
7 new interventions. Those are your testimony.

8 A. No, my --

9 MR. STERN:

10 Objection to the form.

11 THE WITNESS:

12 My testimony was that if Dr. Burns
13 were putting together a program, he should
14 certainly consider new modalities, if
15 there are any. I don't happen to know if
16 there are any.

17 EXAMINATION BY MR. BRUNO:

18 Q. All right. So you weren't saying
19 that there should be research to identify these
20 modalities? You didn't say that?

21 A. No.

22 What I intended to say is that if
23 someone perceives a need for new modalities or
24 the prospect of improved modalities, they
25 should be willing, either publicly or

1 privately, to fund research which would
2 demonstrate that to be the case.

3 Q. Okay. All right. Now, so we've
4 identified our modalities and we've identified
5 the fact that we should be looking for ways to
6 improve effectiveness. How do we determine the
7 costs of those items?

8 A. The costs of particular
9 interventions can be estimated in the same way
10 that one estimates the costs of other medical
11 interventions or procedures.

12 Q. Okay.

13 A. By looking at the resources that
14 are required to deliver the service and finding
15 out what they cost.

16 Q. All right. Did you do that for the
17 cessation program?

18 A. No, I have not done that for the
19 cessation program.

20 Q. Okay. Can you do that? Do you
21 have the ability?

22 A. If I have a clear statement of each
23 of the interventions --

24 Q. Okay.

25 A. -- and exactly what they involve,

1 that is something I can do.

2 Q. All right. And are you telling me
3 that you didn't have that in this case, you did
4 not have a clear statement of the
5 interventions?

6 MR. STERN:

7 Objection to form. He didn't say
8 that.

9 EXAMINATION BY MR. BRUNO:

10 Q. Well, I'm asking what did you say?

11 A. The modalities which were listed by
12 Dr. Burns were very generic in their nature and
13 not -- did not have sufficient detail that I
14 would know how to go about costing them.

15 Q. He says, "Pharmacologic
16 assistance." You did not have enough
17 information to detail the cost of pharma-
18 cologic assistance?

19 A. He lists two or three example
20 chemical compounds, I gather.

21 Q. Right.

22 A. Doesn't say anything about
23 frequency, administration, do they require
24 physicians, do they require other
25 professionals. There just wasn't enough detail

1 there for me to know what that intervention
2 was.

3 Q. Did you find anywhere in Dr. Burns'
4 deposition where the tobacco lawyers asked that
5 question?

6 A. The question I recall being asked
7 was: "Where did you get the costs for each
8 intervention?" And I understand his response
9 to have been: "They were personal judgments
10 based on my experience."

11 Q. That wasn't my question.
12 You, presumably, have talked to the
13 lawyers that hired you and you've told them
14 what you need in order to evaluate Dr. Burns'
15 exemplar plan; right?

16 MR. STERN:

17 Objection to the form.

18 A. I have --

19 EXAMINATION BY MR. BRUNO:

20 Q. Have you done that? "Yes" or "No"?

21 A. I have indicated in my report and,
22 also, in conversations with the attorneys who
23 hired me the kinds of information that I would
24 need to do that exercise.

25 Q. Okay. Well, did you tell them what

1 you just said on the record, that you needed to
2 know more about the pharmacologic assistance,
3 you needed to know whether or not it was doctor
4 prescribed and the like? Did you tell them
5 that?

6 MR. STERN:

7 Objection to the form. Joe, you're
8 implying improperly that he should have.
9 It's not the defendants' burden to cost
10 out Dr. Burns' program. That's Dr. Burns'
11 or the plaintiffs' burden. He's already
12 said he didn't do that.

13 MR. BRUNO:

14 I'm not implying that at all. You
15 told the judge that he couldn't give an
16 opinion. And you told the judge that
17 you needed to depose Dr. Burns to get
18 information in order to get him an
19 opinion. And you took three days and you
20 never asked that question. That's my only
21 point. And I want to make it crystal
22 clear that that's what happened.

23 EXAMINATION BY MR. BRUNO:

24 Q. You, when I deposed you in
25 November, you said you didn't have sufficient

1 information in order to properly critique the
2 program; right? You told me that?

3 A. I did.

4 Q. And you told these lawyers that
5 they needed to go depose the guy to get the
6 information that you would need in order to do
7 a proper critique; right?

8 A. That -- Not in those words, but --

9 Q. Close enough; right?

10 A. I did say that --

11 Q. All right.

12 A. -- since it was not contained in
13 his report or his spreadsheets, that it would
14 be nice if we asked the questions in the
15 deposition.

16 Q. Go ask the questions.

17 A. All right. You told them what
18 questions they ought to ask, too; didn't you?

19 A. I did not specify -- No, I did not
20 write out individual questions for them.

21 Q. You didn't write out the questions
22 but you told them what information you needed?

23 A. That I needed enough information to
24 do this. And they, in fact, asked Dr. Burns:
25 "Where did you get your cost figures?"

1 Q. And I ask you, once again, did you
2 see in those depositions, all three days, all
3 those pages, did you see the question: "Dr.
4 Burns, with regard to the pharmacologic
5 assistance that you have indicated on Page 1
6 under Subparagraph A, did you, Dr. Burns,
7 include in that the cost of a physician
8 dispensing the medication?" Or a question
9 even remotely like that? Was that in there?

10 A. I did not see that question.

11 Q. All right. Did you see any
12 questions that asked Dr. Burns to detail the
13 pharmacologic assistance to which he makes
14 reference in his cessation benefit program on
15 Page 1?

16 MR. STERN:

17 Joe, if you want to ask him about
18 the deposition, unless you just want it
19 to be a memory test, I would ask that you
20 show him the deposition. There were lots
21 of questions about the pharmacological
22 interventions. If you want it to be a
23 memory test, go ahead.

24 MR. BRUNO:

25 Counsel, I don't want to play games

1 with you. It's not a memory test. You
2 said, you told the judge that he needed
3 to have the deposition. He's now got the
4 deposition. And you still don't have
5 enough information to critique his
6 cessation program; isn't that true?

7 MR. STERN:

8 There is no burden on defendants to
9 critique his program. There is no
10 burden --

11 MR. BRUNO:

12 You're forgetting, Counsel, no one
13 is suggesting that you have the burden.
14 I'm suggesting that you told the judge
15 some things that are not true.

16 MR. STERN:

17 That is absolutely false.

18 MR. BRUNO:

19 Then let me ask my questions and
20 we'll have the judge resolve it, okay?

21 MR. STERN:

22 Fine.

23 But this deposition is not the place
24 for you and us to have this argument.

25 MR. BRUNO:

1 On the contrary, it is.

2 EXAMINATION BY MR. BRUNO:

3 Q. The doctor made representations in
4 his depositions. He said, "I'm not going to be
5 prepared to finish this deposition until such
6 time as we completed Dr. Burns."

7 Do you remember that? And that's
8 why we waited till now to do this deposition.
9 Do you understand, Doctor, that that's why
10 we're taking your deposition now?

11 MR. STERN:

12 Dr. Long, just a minute. Objection
13 to the form. Joe, this is becoming
14 argumentative. You're not asking
15 questions; you're arguing with the
16 witness.

17 MR. BRUNO:

18 Good. It's all noted.

19 EXAMINATION BY MR. BRUNO:

20 Q. Do you understand, Doctor, that the
21 reason why your deposition is taking place now
22 is because I had to allow the defendants an
23 opportunity to complete their deposition of Dr.
24 Burns? Did you understand that?

25 A. I understand that the defendants

1 from the beginning have suggested that my
2 deposition would best be taken after the
3 plaintiffs' expert had disclosed all of his
4 information.

5 Q. Okay. All right. And, in fact,
6 now the deposition of Dr. Burns has been
7 finished, right?

8 A. I will accept that as a
9 representation.

10 Q. Yeah. And what I'm trying to --

11 A. I have a volume that doesn't say
12 it's the last word but it does say --

13 Q. You're right. You've got a good
14 point there. It doesn't say it's the last
15 word.

16 What I want to know is what do
17 you know now, from having reviewed Dr. Burns'
18 deposition, that you didn't know when I took
19 your deposition in November that will help
20 me find out what your opinion is about the
21 schedules that relate to the cessation program?
22 And I can move on to the next subject.

23 A. What I know is that he stated in
24 his deposition that the cost per service for
25 each of the intervention modalities were

1 personal judgments based on his experience.

2 Q. All right. Are you in a position
3 to tell the judge or the jury whether or not
4 his cost estimates, based upon his own personal
5 experience, are appropriate or inappropriate?

6 A. I cannot find a -- I mean, this is
7 not the approach that would come from an
8 economist which would tell me: "Here are the
9 component parts of this intervention and here's
10 where I got the costs." I don't have that
11 information.

12 Q. All right. But that's not my
13 question.

14 The question is whether or not you
15 are in a position today to say whether or not
16 his cost estimates are appropriate or
17 inappropriate?

18 MR. STERN:

19 Objection. He just answered that
20 question.

21 MR. BRUNO:

22 No, he didn't.

23 A. They are inappropriate as to
24 methodology.

25 EXAMINATION BY MR. BRUNO:

1 Q. Okay. Well, do you have any
2 experience with cessation programs?

3 A. I do not.

4 Q. All right. Do you know what
5 experience Dr. Burns has with cessation
6 programs?

7 A. That was covered in his deposition.
8 And my recollection is that he had some
9 experience with a California program and some
10 broad acquaintance with cessation programs in
11 conjunction with things he had done in
12 Washington. But that there were no particular
13 cessation programs, for example, at San Diego
14 that he had been involved in.

15 Q. You say some. He testified that he
16 helped write the California Tobacco Control
17 Program. Did you miss that in his deposition?

18 A. I think I mentioned that he had,
19 the experience he had was with --

20 Q. No, not some.

21 A. -- a California program.

22 Q. Right.

23 But let's talk about what that is.
24 The California program contains a cessation
25 program which is funded by the tobacco tax

1 there which has specific modalities that are
2 offered to the public at large; isn't that
3 true?

4 A. I haven't --

5 MR. STERN:

6 Objection. There's no foundation.

7 THE WITNESS:

8 I do not know that that is true.

9 EXAMINATION BY MR. BRUNO:

10 Q. Well, what did you do to find out?

11 A. Why would I need to find out?

12 Q. Because you just testified that you
13 now know what experience he's got with regard
14 to the assessment of the costs. And if you
15 know what that experience is, it seems to me
16 that you want to make inquiry about what it is
17 that he did in the California Tobacco Control
18 Program.

19 And if you didn't do that, then
20 fine, then I'll have my answer.

21 MR. STERN:

22 Objection.

23 A. I haven't had any --

24 MR. STERN:

25 Wait, wait. Objection to the form.

1 There's no question on the floor.

2 MR. BRUNO:

3 That's fine.

4 EXAMINATION BY MR. BRUNO:

5 Q. Doctor, would you please answer?

6 A. I have not had the opportunity to
7 communicate with Dr. Burns about what he did
8 in California.

9 Q. All right. Well, then you don't
10 know whether or not he has personal knowledge
11 of the cost of each of these modalities; right?
12 You don't know one way or the other?

13 A. He testified that he put those
14 numbers down based on his personal experience.

15 Q. I understand.

16 A. So that you have no way then to
17 test whether or not he's right or wrong because
18 you don't know what his experience is with
19 regard to the cost of these services; isn't
20 that true?

21 A. That is what I said. I've not had
22 the opportunity to ask him or talk to him about
23 what it was he did.

24 Q. Okay. So you can't say whether or
25 not his numbers are too high or too low?

1 A. Not on the basis of his testimony,
2 that's correct.

3 Q. All right. I mean, somebody could
4 have asked those questions when they were
5 taking his deposition; right? I mean, they
6 could have asked him specifically: "What is
7 your experience with regard to pharmacologic
8 assistance as it relates to nicotine
9 replacement therapy?" Somebody could have
10 asked that question?

11 A. I have no reason to think they
12 could not have asked that question.

13 Q. All right. What about telephone
14 cessation counseling? Do you have an opinion
15 as to whether or not the numbers that Dr. Burns
16 used are appropriate or inappropriate for the
17 cost of that modality?

18 A. I do not.

19 Q. How about with regard to physician,
20 dentist and other clinical advice to quit
21 smoking and counseling to quit smoking? Do you
22 have any opinion as to whether Dr. Burns'
23 numbers on that are high or low or otherwise?

24 A. It is quite unclear to me what is
25 meant by this item, in both his deposition and

1 the report, as to whether this constitutes a
2 separate service or an add-on to some ongoing
3 encounter. And why it would be an incremental
4 cost.

5 Q. Well, was the question asked in the
6 deposition as you just --

7 A. I do not recall seeing the question
8 in the deposition.

9 Q. And I'm sure you told the lawyers
10 what you needed in order to assess the cost of
11 that particular component of the plan; didn't
12 you?

13 A. I for not only this but for a
14 number of other things indicated that we didn't
15 have any sources or authorities in Dr. Burns'
16 report or spreadsheet.

17 Q. Okay. And you still don't even
18 today as you sit here; right?

19 A. For a number of items, I still do
20 not have authorities or sources.

21 Q. All right. Well, I don't want to
22 hear a number of. I want to be specific to
23 the cessation program. Do you have numbers or
24 authorities for, on Page 1, Number 1., Letters
25 a., b., c. or d.?

1 A. I need to see the page to be able
2 to --

3 Q. And I will be more than pleased to
4 show it to you.

5 A. (Witness reviews document.)

6 MR. STERN:

7 Okay. Can you show it to me, too,
8 please?

9 MR. BRUNO:

10 As soon as the doctor finishes
11 looking at it.

12 MR. STERN:

13 You just have this one copy?

14 MR. BRUNO:

15 You must have eight billion copies
16 of the cessation program circulating.

17 MR. STERN:

18 I'm sure you're right, but I don't
19 have one with me.

20 MR. BRUNO:

21 Well, I don't know what -- Do you
22 need to have another copy of it in order
23 for me to complete my --

24 MR. STERN:

25 I'd like to be able to follow along.

1 But if this is -- if you're just going to
2 ask this question and move off, I'm fine.
3 This is out of Dr. Burns' report, I take
4 it?

5 MR. BRUNO:

6 Correct.

7 THE WITNESS:

8 Could we read back the question that
9 ends with a., b., c. or d.?

10 (Whereupon the preceding question
11 was read back by the court reporter.)

12 THE WITNESS:

13 With respect to the cost of
14 providing each of a., b., c. or d., I do
15 not.

16 EXAMINATION BY MR. BRUNO:

17 Q. You do not.

18 All right. Even after the
19 completion of the deposition of Dr. Burns;
20 isn't that correct?

21 A. If it has been completed.

22 Q. Well, I think we can assume for the
23 sake of this discussion that it has been
24 completed. At least the lawyer said, "I'm
25 finished." And we all got up and we left.

1 Do you have any criticisms of the
2 cessation program that resulted from anything
3 that you learned from the completion of Dr.
4 Burns' deposition?

5 MR. STERN:

6 Do you mean the modalities or Dr.
7 Burns' assessment of costs?

8 MR. BRUNO:

9 I mean anything, anything at all.
10 I'm not going to limit it to anything.
11 I mean, y'all said you had to complete
12 the deposition and now it's finished.

13 EXAMINATION BY MR. BRUNO:

14 Q. So what, if anything, did you learn
15 in that deposition that allows you to offer
16 some new opinions that you couldn't give me
17 when we were here last November?

18 MR. STERN:

19 Well, let me object. That question
20 is so incredibly broad it's impossible to
21 answer. Why don't you take him through
22 the deposition and ask him for his opinion
23 on Dr. Burns' testimony?

24 MR. BRUNO:

25 Why should I do that? You're the

1 ones who said you had to finish the
2 deposition. I'm entitled now to know
3 what you've learned as a result of having
4 finished Dr. Burns' deposition.

5 MR. STERN:

6 Joe, I would just suggest that if
7 you really want to know his reaction to
8 Dr. Burns' testimony that you show it to
9 him.

10 MR. BRUNO:

11 No, I would suggest that you read
12 Case Management Order Number 2, Paragraph
13 11, which requires you to give to me a
14 complete expert report, which you didn't
15 do because you said that you didn't have
16 Dr. Burns' completed deposition.

17 So I'm the one that's being put out,
18 not you, because you have never given me
19 a complete expert report from Dr. Long.
20 That's why I'm in the position -- And
21 forgive me because I wouldn't ordinarily
22 have to ask the question that way.
23 Ordinarily, I'd have a report. And it
24 would say I think this, this, this, this
25 and this.

1 EXAMINATION BY MR. BRUNO:

2 Q. But we've already covered this
3 ground, Doc. You said, "I didn't have enough
4 information. And I met with the lawyers and I
5 told them what I wanted." And they did their
6 thing and now their thing is finished and now
7 you've got the report.

8 So I have to ask you, because I
9 have no other way to do it, what have you
10 learned, if anything, as a result of that
11 deposition with regard to a critique, if you
12 have any more -- I mean, I know you said some
13 things last November -- but do you have
14 anything to add to your critique of the
15 cessation program, the spreadsheets that relate
16 to it and the like, okay? That's my question.

17 MR. STERN:

18 And I would just continue the
19 objection. It's overbroad.

20 MR. BRUNO:

21 It's noted. It's your fault it's
22 overbroad.

23 MR. STERN:

24 Now, if you're going to say that,
25 then I have to respond.

1 MR. BRUNO:

2 Well, it is your fault. I don't --
3 Do you want to show me your supplemental
4 report? Do I have one? Do you have one
5 to show me?

6 MR. STERN:

7 Joe, if you want to try and take up
8 time to make this deposition go longer,
9 that's your right.

10 MR. BRUNO:

11 That's a simple question. Do you
12 have a supplemental report? "Yes" or
13 "No"?

14 MR. STERN:

15 If you want to take up time, rather
16 than asking Dr. Long questions --

17 MR. BRUNO:

18 That's funny. I don't have an
19 answer to that question.

20 MR. STERN:

21 -- with colloquy between us, that's
22 your choice.

23 MR. BRUNO:

24 Because you don't want to answer.

25 MR. STERN:

1 But Dr. Long gave a report, that
2 report is complete, it does have opinions
3 on cessation. If you want to ask him
4 whether he has new opinions in view of Dr.
5 Burns' testimony, that's your prerogative.

6 MR. BRUNO:

That's what I just asked.

8 MR. STERN:

9 All I would suggest is that you show
10 him Dr. Burns' testimony and let him
respond point by point.

12 MR. BRUNO:

13 I'm not going to, look, I'm not
14 going to --

15 MR. STERN:

16 Otherwise, it's overbroad.

17 MR. BRUNO:

18 My point is if you didn't want to
19 give me his report like you were supposed
20 to do, then it's your problem, okay? I
21 mean, the deposition says what it says.
22 There are pleadings that you filed in
23 court saying that you couldn't even
24 address this issue because you wanted
25 to finish Dr. Burns. This is something

1 you've told the Court, so you've got to
2 live with it.

3 EXAMINATION BY MR. BRUNO:

4 Q. I'm just trying to find out what,
5 if anything, that you want to add. So do you
6 have anything on the cessation side of it? And
7 then we can move on.

8 A. Yes.

9 Q. Okay. And that would be?

10 A. First, that Dr. Burns did not have
11 any specific citations or authorities for his
12 cost estimates of each intervention modality
13 per person served.

14 Q. Wait. That's what you said in
15 November. That's exactly what you said.

16 A. Now I know from his deposition --
17 You asked me what I learned from his
18 deposition. He said I -- these are personal
19 estimates, they're not from some authority or
20 citations from a particular program.

21 Q. Now, wait a minute. He's the
22 authority. You don't regard him as an
23 authority?

24 MR. STERN:

25 Objection. Argumentative.

1 MR. BRUNO:

2 No, that's not argumentative.

3 EXAMINATION BY MR. BRUNO:

4 Q. Do you -- If you don't, it's okay,
5 it's no big deal. If you're telling me "I do
6 not regard Dr. Burns as an authority," then
7 that's fine. But he has quite a reputation in
8 this field; doesn't he?

9 A. I have no idea what his reputation
10 in this field is.

11 Q. Did you check it out?

12 A. I have a copy of his C.V.

13 Q. That's it?

14 A. That's it.

15 Q. All right. So you don't have any
16 idea about whether or not Dr. Burns is
17 recognized in this country as one of the
18 leading experts with regard to tobacco control?
19 You don't know that one way or the other?

20 MR. STERN:

21 Objection to the form.

22 A. That's correct.

23 EXAMINATION BY MR. BRUNO:

24 Q. All right. And I merely asked the
25 question if, in fact, he is a well-recognized

1 expert in the field -- and that's an if -- then
2 he might be able to be his own authority on
3 these things; isn't that true?

MR. STERN:

His own authority for what drugs
cost?

MR. BRUNO:

Yes. Yes. Obviously, yes.

Doctor?

MR. STERN:

In lieu of sources? Okay.

MR. BRUNO:

Yes.

EXAMINATION BY MR. BRUNO:

Q. He could be a source; could he not?

A. I think he could be a source on
matters medical.

Q. Okay.

A. I have not seen anything in his
C.V. or, for that matter, in any of the other
materials that have been presented to me or in
his depositions that would suggest to me that
he has any expertise in health care, economics
or costs.

Q. Do you have to be an expert in

1 health care, economics or costs to know how
2 much it costs to buy a patch?

3 A. You do not.

4 Q. Okay. Do you have to be an expert
5 in economics to know how much a dose of
6 bupropion -- and forgive my inability to say it
7 -- costs?

8 A. No, but it would be useful if you
9 had some understanding of costs and payment.

10 Q. Okay. Well, you can call the local
11 drugstore here and you can find out, if you
12 wanted to, the cost of bupropion; could you
13 not?

14 A. You could get that piece of
15 information from a drugstore and it would be a
16 completely inappropriate piece of information
17 if you were trying to determine the costs of
18 this program.

19 Q. All right. Well, how would you do
20 it? Then if that would be inappropriate to
21 call the drugstore, how would you do it?

22 A. The way that any program would be
23 costed would be to look at the quantities of
24 any particular product that would be used, the
25 way in which it would be administered. And

1 then with that information, find out what kinds
2 of costs are consistent with that level of
3 volume and that kind of distribution.

4 Q. All right. So what did Dr. Burns
5 do to assess the quantities used?

6 A. Apparently nothing.

7 Q. Okay. Well, what can you do?

8 A. What can who do?

9 Q. What can a person do to assess the
10 quantities that would be used?

11 A. One would need to specify what is
12 required for each participating individual,
13 over what period of time, with which intensity,
14 and determine necessary quantities from that
15 kind of information.

16 Q. Okay. And who might you talk to to
17 learn that?

18 A. You would start with talking to the
19 person who is designing the substantive medical
20 content of the program.

21 Q. Which would be Dr. Burns?

22 A. Dr. Burns.

23 Q. Well, okay. So we're kind of back
24 to square one then; aren't we? Since he's the
25 guy that made the estimates?

1 A. And Dr. Burns hasn't specified
2 that.

3 Q. Well, he wasn't asked the question,
4 either; was he? Nobody asked him the question:
5 What was the quantities that would be used on a
6 per person basis? I was in the deposition.
7 That question was not asked.

8 MR. STERN:
9 Dr. Long has already testified that
10 Dr. Burns did answer that question.

11 MR. BRUNO:
12 No, he didn't.

13 MR. STERN:
14 He said he gave his personal
15 judgments.

16 MR. BRUNO:
17 No, that's not what he said.

18 MR. STERN:
19 Well, you can ask Dr. Long.

20 MR. BRUNO:
21 You can re-read the deposition.

22 EXAMINATION BY MR. BRUNO:

23 Q. Dr. Burns was not asked the amount
24 of ibu -- sorry, of bupropion or clonidine or
25 nicotine replacement therapy that would be used

1 on a person-by-person basis unless your memory
2 is different; isn't that true? That question
3 was not asked by the lawyers?

4 A. My recollection would be that that
5 question, as you have stated it, was not asked
6 by the lawyers.

7 Q. All right. But going back to what
8 you just said, though, the person to ask is the
9 guy that's going to be the one who's assessing
10 how much of these drugs or nicotine replacement
11 should be administered, which in this case
12 might be Burns. But are there some other
13 people out there that we could talk to?

14 A. Well, it's my appreciation that Dr.
15 Burns is the author of this program.

16 Q. Right.

17 A. And from my perspective, that makes
18 it his responsibility to define the program in
19 sufficient specificity that one can analyze its
20 costs. That has not been done. It wasn't done
21 in his report, it wasn't done in his
22 spreadsheet. And all he said in his deposition
23 was that he had used his personal estimates.

24 Q. That's correct.

25 And there's nothing that prevented

1 the lawyer from delving into how he came to
2 those personal estimates; was there?

3 A. There was possibly a time
4 constraint, but I don't have personal knowledge
5 of that.

6 Q. All right. Nobody asked him what
7 he thought would be an appropriate dose of
8 bupropion or appropriate dose of clonidine or
9 appropriate course of nicotine replacement
10 therapy, nobody asked him that question; right?

11 MR. STERN:

12 Objection. It assumes that somebody
13 should have. But go ahead.

14 A. I did not see that question in the
15 transcript.

16 EXAMINATION BY MR. BRUNO:

17 Q. All right. And somebody should
18 have asked him that question if somebody wanted
19 to know with specificity how Dr. Burns
20 calculated his numbers; isn't that true?

21 MR. STERN:

22 Objection. Dr. Long has just
23 testified that he feels that it was Dr.
24 Burns' responsibility to affirmatively
25 offer that. You're asking the same

1 questions over and over and over again.

2 MR. BRUNO:

3 Then why do you keep coming up with
4 different objections then? You're getting
5 more creative as time goes by?

6 MR. STERN:

7 I think they all fit.

8 MR. BRUNO:

9 I don't think any of them fit, but
10 -- So answer my question.

11 THE WITNESS:

12 Which was?

13 MR. BRUNO:

14 Which was -- Well, let's read it
15 back. And we will need another day.

16 MR. STERN:

17 Let me state for the record, Cheryl,
18 that we do not agree to another day.

19 MR. BRUNO:

20 Look, you started this deposition at
21 1:30. It wasn't by my choice.

22 MR. STERN:

23 We have already agreed for this
24 deposition to go forward after the
25 deadline. There is no reason that this

1 deposition can't be completed today. We
2 do not --

3 MR. BRUNO:

4 There is every reason, particularly
5 since counsel keeps interjecting with
6 inappropriate and unnecessary objections,
7 there is no way we're going to finish. And
8 I'm telling you now you chose to start at
9 1:30. I was available to start at 9:00
10 o'clock. But you wanted to do this and
11 you did it on purpose.

12 MR. STERN:

13 Joe, as you --

14 MR. BRUNO:

15 Now you have to suffer the
16 consequences.

17 MR. STERN:

18 Joe, as you say that, you're talking
19 over me. Dr. Long teaches. He has a
20 schedule of classes he has to teach.

21 MR. BRUNO:

22 Okay. So that means we can
23 reschedule. Doctor, --

24 MR. STERN:

25 For the record, we're not agreeing

1 to reschedule.

2 MR. BRUNO:

3 Well, that's fine.

4 MR. STERN:

5 But we'll argue that later.

6 MR. BRUNO:

7 Take it up with the judge.

8 MR. STERN:

9 Okay.

10 MR. BRUNO:

11 Now, we need to get the question

12 since the doctor forgot the question.

13 (Whereupon the preceding question

14 was read back by the court reporter.)

15 EXAMINATION BY MR. BRUNO:

16 Q. Isn't that true? That was
17 something that was deemed to be necessary.

18 A. There are two ways to get the
19 information: For Dr. Burns to set it forth
20 in his role as an economist in his report or
21 spreadsheets, or for defendants to attempt to
22 get it through some other discovery means.

23 Q. Okay. All right. Now, what other
24 critiques do you have of the cessation program
25 that you didn't have before November?

1 A. The -- That he did not have a
2 specific basis for the positive incremental
3 changes in participation or quit rates against
4 the background rate which he reported, the way
5 things are happening currently.

6 He did not have a basis, again,
7 other than personal judgment, for the
8 increments in number of people utilizing a
9 particular modality or the proportion of those
10 people who would, in fact, successfully quit in
11 the presence of his program compared to in the
12 absence of his program.

13 Q. I'm sorry. I did not follow any
14 of that. Start with the positive incremental
15 stuff.

16 A. Okay.

17 Q. Let's start at the top.

18 A. Let's start it again.

19 He reports in his spreadsheet for
20 the existing state of the world the number of
21 people who attempt to quit, who attempt to quit
22 using each of the modalities, and the
23 proportion of them who are successful.

24 Q. Why don't you show me what you're
25 referring to. I have here the budget.

1 A. It would be on the second of the
2 three sheets.

3 Q. Okay. Here's the second of the
4 three sheets.

5 A. (Witness reviews document.)

6 Q. Let's mark that as "Long Number 4."
7 (Whereupon the document as described
8 above was marked as "Long Exhibit Number
9 4.")

10 EXAMINATION BY MR. BRUNO:

11 Q. All right. And why don't you
12 circle what it is that you're complaining
13 about.

14 MR. STERN:

15 Joe, just for the record, which
16 exhibit is this out of? Out of Dr. Burns'
17 deposition? I mean, he had many spread-
18 sheets. Is this the one that Dr. Burns
19 said was the final?

20 MR. BRUNO:

21 No, this is the one that you were
22 given as a part of his report.

23 THE WITNESS:

24 This is -- I recognize this as one
25 of the three, excuse me, the three pages

1 of spreadsheets that were part of the
2 original report.

3 MR. STERN:

4 Okay.

5 THE WITNESS:

6 Okay. There is -- There are two
7 columns here which I will note, label
8 "Current," which are "Percentage of quit
9 attempts" using each modality and the
10 current real-world effectiveness of those
11 modalities.

12 Then there are two more columns
13 which he calls "Potential fraction
14 of quit attempts" using that modality and
15 "Potential effectiveness" in which in all
16 of the instances on proportionate people
17 who go for that particular modality.

18 And in most of the instances of,
19 other than "Self," where the potential
20 effectiveness is greater than the current
21 real-world effectiveness, the potential --
22 the percentage of persons opting for a
23 particular method is greater than in the
24 current world.

25 EXAMINATION BY MR. BRUNO:

1 Q. Bottom line, the people who are
2 using the program are more than the people who
3 are currently using this particular --

4 A. More use each particular method.

5 Q. Okay.

6 A. And a larger proportion of those
7 who use the method, not just a larger number,
8 but a larger proportion of those who use the
9 method are successful.

10 Q. Okay.

11 A. Okay?

12 And what I learned from the
13 deposition is that just as is the case for the
14 cost of service, that these higher numbers in
15 proportion using the program and higher numbers
16 in terms of proportion of successes were,
17 again, personal judgments on his part without
18 citation to specific experience or authority.

19 Q. Okay. And so what is your
20 suggestion about how to do that?

21 A. Well, what I need is a basis upon
22 which to know that these numbers weren't simply
23 picked out of the sky someplace.

24 Q. Well, let's see if we can
25 understand how this is going to work. If we

1 win this case, you understand there's going to
2 be a separate phase for determining how much
3 money should be put in a fund to pay for this;
4 right?

5 A. That's --

6 MR. STERN:

7 Objection to the form. Go ahead.

8 EXAMINATION BY MR. BRUNO:

9 Q. Is that true?

10 A. It's my understanding that the
11 judge has indicated that, the Court has
12 indicated that there would be, assuming
13 liability was determined --

14 Q. Right.

15 A. -- a separate process for
16 proceeding to look at damages.

17 Q. Okay. So what I'm hearing you say
18 is that you, on behalf of tobacco, are not
19 going to tell the Court what you think the
20 number should be; right? You're just going to
21 attack Dr. Burns' methodology for his number?

22 A. I am, A., not designing a program.

23 Q. All right. I understand that.

24 That's not my question.

25 A. Okay.

1 MR. STERN:

2 No, no, he wasn't finished.

3 MR. BRUNO:

4 All right.

5 THE WITNESS:

6 B., am -- have been asked to make
7 an assessment or a critique of a program
8 being designed by Dr. Burns.

9 EXAMINATION BY MR. BRUNO:

10 Q. Right.

11 Well, we've pretty much already
12 established that. And that's what I just said.

13 A. And to assess the costs, whether
14 the costs which he is setting forth for his
15 proposed program appear to be reasonable.

16 Q. All right. Well, that doesn't
17 answer my question because here's the question.

18 A. Okay.

19 Q. We win the case, there's another
20 phase at which the Court is going to figure
21 out how much money tobacco should pay for
22 cessation; right? We've won now. Now it's how
23 much?

24 A. (Witness nods head affirmatively.)

25 Q. So do I understand that you --

1 Well, do I understand that tobacco is not going
2 to tell the judge how much they think should be
3 put into a program to fund cessation?

4 MR. STERN:

5 Objection. Dr. Long can only answer
6 for Dr. Long. And I think he's already
7 answered that question for Dr. Long.

8 EXAMINATION BY MR. BRUNO:

9 Q. Well, you are familiar with the
10 other experts in the case; aren't you?

11 A. I'm sorry. When you say "familiar
12 with" --

13 Q. Do you know who tobacco has hired
14 as experts in this case?

15 A. I have -- I do not know that I know
16 all of their experts.

17 Q. You don't know that. All right.
18 So as you sit here today, you don't
19 know whether or not tobacco is going to suggest
20 to the Court what the appropriate number for
21 funding a cessation program should be if the
22 plaintiffs prevail on liability?

23 A. Well, it seems to me there are
24 three things that have to happen.

25 Q. Okay.

1 A. One is there has to be a numerical
2 estimate of the class size, there has to be a
3 definition of an efficacious program, and there
4 has to be a cost estimate produced for that
5 program that the Court finds credible.

6 Q. Well, I agree.

7 But so what you're telling me is
8 you're not going to offer any such evidence on
9 those three things?

10 MR. STERN:

11 Let me just object. Dr. Long will
12 give any opinions that the Court wants to
13 hear that are within his expertise.

14 MR. BRUNO:

15 Not if they're not in his report,
16 he's not.

17 MR. STERN:

18 Well, take that up with the judge.
19 I mean, --

20 MR. BRUNO:

21 You take that up with the judge.
22 Are you telling me that I don't have a
23 right to know what his opinions are now?
24 Please.

25 MR. STERN:

1 No, of course not, Joe. But your
2 questions --

3 MR. BRUNO:

4 Of course not?

5 MR. STERN:

6 Of course, I'm not telling you that.
7 Your questions are so overbroad.

8 EXAMINATION BY MR. BRUNO:

9 Q. All I want to find out, Doc, is
10 real simple, okay? You've attacked Burns.
11 That's fine, that's fair, all right? But you
12 do recognize that we might win this case;
13 right?

14 A. That's a possibility.

15 Q. Okay. It's a possibility.

16 And then there will be a necessity
17 to determine how much money tobacco should pay
18 to fund cessation. So I'm trying to find out
19 are you going to offer an opinion as to how
20 much money tobacco should pay to fund
21 cessation? You've given me the three
22 methodologies -- I'm sorry, the three things
23 that have to be done. But tobacco hasn't asked
24 you to do that?

25 A. Currently, tobacco has not asked me

1 to do that.

2 Q. But you recognize that in order to
3 accomplish the work of determining the amount
4 of money, somebody's got to do it?

5 A. That's correct.

6 Q. That's correct.

7 A. And if --

8 Q. And it can be done?

9 A. -- liability were found and a class
10 size were established and a -- the substantive
11 content of a program were specified, and I were
12 then asked to give an estimate of the cost of
13 that program, I could do that.

14 Q. You could do that.

15 Okay. Now, why couldn't you have
16 assessed the class size, that is, up till now?

17 A. To the best of my knowledge, no one
18 has assessed class size now or at any previous
19 time.

20 Q. Hasn't Dr. Burns?

21 A. Dr. Burns has defined a number of
22 persons who have certain smoking character-
23 istics. That's one element of the definition
24 of the class, as I appreciate it, but certainly
25 not all of the elements of the class.

1 Q. Well, how would you do it? How
2 would you assess class size?

3 A. The -- First of all, I've not been
4 asked to assess class size. Second, the --
5 many of the determinations that it seems to
6 me go into class size -- And the questions
7 are slightly different for cessation and for
8 monitoring because we're talking about people
9 with different characteristics for the two
10 programs. Much of that has to do with things
11 that epidemiologists and physicians would need
12 to bring expertise to bear on.

13 Q. Well, are you telling me that
14 there's no current information that will allow
15 you to determine the number of Louisiana
16 citizens who smoke?

17 A. I'm not aware that that piece of
18 information is part of the class definition.

19 Q. It's not? The definition says
20 Louisiana smokers.

21 A. Not as of today.

22 Q. Well, maybe you need to re-read it.
23 But could you determine the number
24 of Louisiana smokers today?

25 A. I believe that number can be

1 determined. I think we talked about that --

2 Q. Right.

3 A. -- in the earlier portion of the
4 deposition.

5 Q. All right. And is there also
6 information available that would identify the
7 percentage of those individuals who want to
8 quit?

9 A. I am not aware of that.

10 Q. You're not aware of any data at all
11 on that subject?

12 A. Of how many of these people want to
13 quit? I do not know that.

14 Q. Are you aware of any statistical
15 data that would give an indication of what
16 percentage of the current smoking population
17 in Louisiana wants to quit?

18 A. As we sit here today, I don't know
19 if that question was asked in any of the
20 surveys we talked about last time. And that,
21 of course, wouldn't relate to today's
22 population in any event.

23 Q. Well, it wouldn't relate to today's
24 population, you say. You're telling me that it
25 wouldn't be a piece of information that would

1 assist in the assessment of costs?

2 A. That piece of information could be
3 useful but it wouldn't be determinative.

4 Q. When you say "determinative," what
5 do you mean? You mean you want to get the
6 costs down to the penny? Is that how you would
7 do this program?

8 A. I didn't know we were talking about
9 costs. I thought we were talking about class
10 size.

11 Q. Well, class size relates to cost/
12 doesn't it?

13 A. Right now we were talking about
14 determination of class size.

15 Q. Well, let's back up.

16 Because what you said was in order
17 to get to the cost, you had to determine class
18 size and the content specified in the cost of
19 that service; right?

20 A. That's correct.

21 Q. And then after that, it's
22 multiplication --

23 A. By and large.

24 Q. -- right?

25 I mean, it's not terribly

1 complicated stuff. How many people --

2 A. It's going out and assessing --

3 Q. Right.

4 A. -- costs for component parts and
5 looking at volumes and a number of other
6 things.

7 Q. All right. And when you're doing
8 costing for groups of people, do you need to
9 know the number of people who want to quit with
10 absolute precision so that you have identified
11 every single human being that wants to quit
12 versus every human being who doesn't want to
13 quit? Do you need that kind of precision in
14 order to assess the costs?

15 MR. STERN:

16 Let me just object to the extent it
17 calls for a legal conclusion because the
18 class is the class. I mean, you can ask
19 him if you want to estimate the number
20 of people who desire to quit, but that
21 wouldn't necessarily be the same as the
22 people who fit this class definition.

23 MR. BRUNO:

24 That's totally inaccurate. And
25 you're talking about your legal

1 conclusion. That's your own personal
2 legal conclusion, which has no place in
3 this deposition.

4 EXAMINATION BY MR. BRUNO:

5 Q. I'm asking you. I mean, you do
6 this in your work at Tulane University. You
7 assess the costs of programs; don't you?

8 A. Yes.

9 Q. I mean, you have, in fact, done
10 that. And you, when you are assessing these
11 costs, you don't go out there and identify
12 every individual person who is going to avail
13 themselves and then do a mathematical
14 calculation that calculates it to the penny?
15 You do cost estimates; don't you?

16 A. That's correct.

17 Q. All right. So you can do a cost
18 estimate for a cessation program for the
19 citizens of Louisiana based upon data that
20 exists right now; can't you?

21 A. Some of the data which we have
22 discussed would help in making that estimate.
23 There are, you know, other questions, some of
24 which I believe to be legal, about membership
25 in that class.

1 Q. Like what?

2 A. For example, in one of the things
3 that Dr. Burns was questioned about at some
4 length was whether one could make an
5 appropriate assessment of the number of people
6 who were smoking on that 1988 date.

7 Q. But why would you have to --

8 A. And he approached it with an
9 approximation of saying, "Well, if I start at
10 age 25, I'm picking up most of the people who
11 started smoking." But didn't have quantified
12 -- quantitative data that would say what
13 proportion that was picking up.

14 There are, you know, I believe,
15 legal questions relating to causation that are
16 not things I'm going to opine about.

17 Q. What do you mean, legal questions
18 of causation?

19 A. If, for example, the tobacco
20 companies were, per your hypothet, found
21 liable --

22 Q. For a defective product.

23 A. -- then a question arises as to,
24 among the smokers who would be potentially
25 eligible for the class, how many are there

1 because of the -- how many are smoking because
2 of tobacco company behavior as opposed to would
3 have been smoking, anyway.

4 Q. What difference does it make why
5 they smoke if the product is defective?

6 A. Well, as I say, that's a set of
7 legal arguments that, you know, I'm not going
8 to opine about. But I understand that there
9 are issues that are going to be ultimately
10 decided by the Court as to the various
11 components that would determine class size.
12 None of which have been addressed by Dr. Burns
13 and which I'm not addressing, either.

14 Q. Right.

15 But you could, if you wanted to?
16 In other words, you could give a realistic
17 estimate of the cost of this program based upon
18 the facts as you currently know them; couldn't
19 you?

20 A. I don't know class size.

21 Q. And your testimony is that you
22 couldn't even estimate it; right?

23 A. Not until all of those
24 determinations have been made.

25 Q. Determinations as to --

1 A. It's still an estimate at that
2 point.

3 Q. It will always be an estimate?

4 A. Right.

5 Q. I mean after you're all finished,
6 it is still an estimate?

7 A. That is correct.

8 But until, you know, there are
9 determinations that would, you know, say what
10 proportion of, in the case of cessation, this
11 658,000 dollar -- this 658,000 person number
12 are, in fact, meeting the class definition,
13 then it doesn't make sense to talk about
14 aggregate costs. We could talk about the cost
15 of a modality for one person but you can't talk
16 about programmatic costs.

17 Q. Sounds to me like it's lawyer
18 driven and not expert driven then? You don't
19 know what the definition says, so -- but you've
20 got to wait for the lawyers to tell you who's
21 in the class?

22 MR. STERN:

23 Objection. Argumentative.

24 EXAMINATION BY MR. BRUNO:

25 Q. Is that what you're saying?

1 A. I think the Court is the one who
2 will ultimately determine who is and is not in
3 the class.

4 Q. No, it won't. Who told you that?

5 (Whereupon a discussion was held
6 off the record.)

7 EXAMINATION BY MR. BRUNO:

8 Q. Who told you that the Court will
9 determine who's in and who's out of the class?

10 A. That is, in part, an assumption on
11 my part because you told me that the Court
12 wrote the class definition.

13 Q. The purpose of which was to allow
14 people to read it and determine for themselves
15 if they're in the class? Did anybody tell you
16 that?

17 A. No.

18 MR. STERN:

19 Did anybody tell you what?

20 MR. BRUNO:

21 That that was the purpose of the
22 definition: For people to read it in
23 order to assess whether or not, in their
24 own view, they're in or out of the class?

25 MR. STERN:

1 Objection to the form.

2 THE WITNESS:

3 I'm sorry. Okay. You're talking
4 about potential people -- people
5 potentially in the class?

6 EXAMINATION BY MR. BRUNO:

7 Q. Well, let's get down to cases,
8 Doctor. I mean, we can play games, I guess,
9 all day or not. But let's be realistic.
10 People who smoke, who want cessation, who are
11 Louisiana residents, are you telling me that
12 you can't figure out how many there are of
13 those people based upon what you currently
14 know? There's no way to do that?

15 A. There's a way to estimate that, but
16 that's not what I understand the class to be.

17 Q. Okay. There is a way to estimate
18 that. How do you do that?

19 A. Even though it's not the class?

20 Q. That's what your lawyers are saying
21 and I'm disagreeing, so I'm not going there.

22 I'm saying assume for the purpose of the
23 question Louisiana smokers who want to quit,
24 they're in this class. Is there a way to
25 identify how many of them there are? "Yes" or

1 "No"?

2 MR. STERN:

3 So -- First, objection to the form.
4 It's argumentative. But the question is
5 just current smokers who desire to quit,
6 no other criteria?

7 MR. BRUNO:

8 There are no other criteria. But,
9 you know, I'm not going to argue with you,
10 Counsel. There are not.

11 EXAMINATION BY MR. BRUNO:

12 Q But go ahead, Doc.

13 A If that were the class definition,
14 current Louisiana smokers who desire to quit,
15 one could make an estimate of that number.

16 Q All right. And then you could
17 determine the cost of the cessation services
18 or at least the content of the program that
19 was being offered?

20 A If we had a specific set of
21 services and a basis for participation rates
22 in the different modalities, then we could
23 begin to estimate the cost of that service per
24 person.

25 Q Okay. Now, what would you use as

1 the basis for your participation rates? Where
2 would you go to get that?

3 A. Because we are talking about
4 participation rates in a program that does not
5 exist --

6 Q. Right.

7 A. -- as opposed to existing
8 participation rates --

9 Q. I understand.

10 A. -- then someone who had practical
11 experience in a comparable program that could
12 point to empirical measurement from that
13 program could bring that information to the
14 table.

15 Q. Right.

16 And the -- let's see -- the best
17 person in that position would be Dr. Burns in
18 view of his experience?

19 A. I do not know that.

20 Q. Well, in view of his experience in
21 California, it's highly likely that that would
22 be the guy to talk to; wouldn't it?

23 MR. STERN:

24 Objection. Lack of foundation.

25 A. Well, that would be one piece of

1 information. And if you believed that behavior
2 of --

3 EXAMINATION BY MR. BRUNO:

4 Q. Californians?

5 A. -- the people who live in
6 California is predictive of the behavior of
7 people who live in Louisiana, then you would
8 be closer than if you didn't believe that.

9 Q. And do you have any scientific data
10 that would suggest that the smoking behaviors
11 of the people of California are so
12 substantially different from the smoking
13 behavior of the people of Louisiana that that
14 data might not be predictive in any way?

15 A. Well, there will be statistical
16 data that would allow some comparisons between
17 California and Louisiana. But it's certainly
18 more than simply smoking behavior. It's not
19 the smoking behavior; it's the desire-to-quit
20 behavior that is relevant here.

21 Q. Okay. Do you have any information
22 that would suggest that the desire-to-quit
23 behavior of Californians is different from the
24 desire-to-quit behavior of Louisianians?

25 A. I don't as we sit here.

1 Q. Okay.

2 A. I know that there are very
3 different demographic characteristics through
4 the two populations.

5 Q. Are you aware of any other states
6 that have smoking-cessation programs in place?

7 A. As states?

8 Q. As states. As in tobacco control
9 like Florida or like Massachusetts?

10 A. I'm not personally aware of
11 Florida, but I believe I've read somewhere
12 that Massachusetts does have a program.

13 Q. Right.

14 And are you aware that Dr. Burns
15 is closely associated with the Massachusetts
16 program as well?

17 A. I don't know that I was aware of
18 that.

19 Q. Okay. All right. Now, --

20 THE VIDEOGRAPHER:

21 I need to change videotapes. Going
22 off the record at 3:37.

23 (Whereupon a brief recess was taken
24 at this time from 3:37 o'clock p.m. to
25 3:41 o'clock p.m.)

1 THE VIDEOGRAPHER:

2 We're going back on the record at
3 3:41.

4 EXAMINATION BY MR. BRUNO:

5 Q. All right. Doctor, I've got before
6 you the -- Well, what exactly have I got before
7 you? I'm not about to characterize it. It was
8 attached to a letter that I got --

9 A. Yes.

10 Q. -- dated April 5. What is it?

11 A. It's a portion of what was marked
12 as "Long 3."

13 Q. Okay.

14 A. All right. And it's the portion
15 that I'm responsible for.

16 Q. All right. But, I mean, what is
17 it? What is the series of pages?

18 A. This is a hard copy printout of
19 some spreadsheets that I constructed with
20 regard to the cost of monitoring services.

21 Q. Okay. All right. What's your
22 bottom line on those sheets?

23 A. Well, there are lots of bottom
24 lines.

25 Q. Oh, there are? I couldn't figure

1 that out. Is there not -- There's more than
2 one bottom line?

3 A. There's more than one bottom line
4 in both the literal sense of total costs.

5 Q. Okay.

6 A. And, also, in terms of conclusions.

7 Q. Okay. Well, let's take them one at
8 a time then.

9 A. The other thing that is attached
10 is, in addition to the spreadsheet, is simply
11 a list of --

12 Q. Reliance materials?

13 A. -- reliance materials for the
14 spreadsheets.

15 Q. Okay. All right. So why don't we
16 take one bottom line at a time.

17 A. Well, first of all, there are two
18 alternative sets of sheets, one of which is
19 predicated on -- Well, let me back up. Let
20 me say what's in common to the two sheets.

21 Q. Okay.

22 A. Both of the sheets --

23 Q. Forgive me. You know what we ought
24 to do since you're doing that? Let's mark them
25 separately, in globo. So "5" will be on, I

1 guess, the left stack and "6" will be on the --
2 And that will allow you to further identify the
3 stacks.

4 (Whereupon the documents as
5 described above were marked as "Long
6 Exhibit Number 5" and "Long Exhibit
7 Number 6.")

8 THE WITNESS:

9 All right. You want that separate?

10 MR. BRUNO:

11 Sure. Why not? She made out all
12 these numbers. I hate for them to go to
13 waste. She worked so hard on that.

14 (Whereupon the document as described
15 above was marked as "Long Exhibit Number
16 7.")

17 MR. BRUNO:

18 Okay. All right. So we've got
19 "Long 5," "Long 6" and "Long 7."

20 THE WITNESS:

21 Right.

22 MR. BRUNO:

23 All right.

24 THE WITNESS:

25 "5" and "6" are the spreadsheets and

1 "7" is the reliance.

2 EXAMINATION BY MR. BRUNO:

3 Q. Okay. And you were telling me what
4 the similarities were between "5" and "6."

5 A. Okay. Each of "5" and "6," for
6 their internal purposes, take the numbers that
7 Dr. Burns set forth in his spreadsheet for
8 class size and age distribution within that
9 class size. And both sheets use Dr. Burns'
10 program of medical monitoring services as he
11 altered it in the course of his deposition.

12 Q. Okay.

13 A. And both of the spreadsheets look
14 at the cost to the program per test that was
15 used by Dr. Burns in his original spreadsheets.

16 Q. Okay.

17 A. And the cost per test that would
18 be the amount, equal to the amount paid by the
19 Medicare program for these services to its
20 beneficiaries. And as a third data point, an
21 amount, a cost-per-test to the program equal
22 to the payment in Louisiana for the Medicaid
23 program purchasing these services for its
24 beneficiaries.

25 Q. Okay.

1 A. Both sheets also, as an additional
2 alternative with respect to spiral CT scanning
3 only, do a cost estimate based on the direct
4 purchase and operation of the scanners as
5 opposed to buying CT scans from existing
6 providers.

7 Q. You mean buying the hardware
8 instead of the service?

9 A. Buying the hardware --

10 Q. Right?

11 A. -- and the other resources required
12 to deliver scans. That is, hiring people as
13 well as buying machines.

14 Q. Okay. And have you got
15 administration in that one?

16 A. I do.

17 Q. Okay. And --

18 A. And I have administration both in
19 terms of administrative costs associated with
20 running the scanners and both sheets also have
21 administrative costs for the overall program.

22 Q. Okay. So the running and the
23 program -- The program, that would include
24 the recordkeeping and the like; right?

25 A. Yes.

1 Q. Okay. All right.

2 A. The two sets of sheets differ in
3 that one set uses the 35 percent participation
4 rate testified to by Dr. Burns as his original
5 estimate concurred in by the panel of Louisiana
6 physicians with whom he worked. And that's
7 "Long 5."

8 And "Long 6" uses the 100 percent
9 participation rate which was contained in his
10 report that he testified to was based on
11 instructions from counsel.

12 Q. Okay. Good.

13 So it sounds to me like you're
14 going to have, you're going to have -- well,
15 you'll have a bottom line for the 35 percent
16 and you'll have -- well, actually, you have
17 two bottom lines for the 35 percent, one with
18 buying the machines versus buying the services;
19 right? And then on the hundred percent, you'll
20 have two bottom lines?

21 A. Well, associated with the differ-
22 ence between buying the services and producing
23 the services, if you would.

24 Q. Got you. All right.

25 A. But then for the other services,

1 other than CTs, we have priced out at Medicare
2 rates, which Dr. Burns had testified in his
3 deposition was what he intended to use; and
4 Medicaid rates, which he also testified in his
5 deposition was another program that could be
6 looked to.

7 Q. Okay. So --

8 A. So there's Medicare rates, Medicaid
9 rates, with and without buying the scans versus
10 producing the scans.

11 Q. All right. So with the -- Let's go
12 to the hundred percent, okay? What is your
13 bottom line buying the services of the CT under
14 the three cost evaluations? You made it three?
15 Didn't you say Medicare and Medicaid? Or is it
16 two?

17 A. Right. If we bought the scans from
18 existing providers --

19 Q. I suggested buying the services but
20 we'll take that first. We're buying the
21 equipment now?

22 A. Okay. That's different.

23 Q. Never mind. I just want to follow
24 you. You're buying the service?

25 A. You're buying the service --

1 Q. All right. I'm going to write that
2 down. Buying the service.

3 A. -- as opposed to producing the
4 service.

5 Q. Okay. All right.

6 A. If we were buying scans, scan by
7 scan --

8 Q. Got you.

9 A. -- and paying the same price that
10 Medicare pays --

11 Q. Right.

12 A. -- in Louisiana, and what I've done
13 here is I've used the rate that Medicare pays
14 in New Orleans. They also pay a different rate
15 outside of New Orleans, which is slightly
16 lower. But I've used the higher rate rather
17 than try to say how many were in New Orleans
18 and out of New Orleans.

19 Q. All right.

20 A. So these are at the higher of the
21 two possible Louisiana Medicare rates. And
22 this is for a single year.

23 Q. One year.

24 A. For one year.

25 Q. Got you.

1 A. Including programmatic
2 administrative costs would be about 202 million
3 dollars.

4 Q. Okay. Two hundred and two million.

5 A. Right.

6 And as I say, that's slightly
7 overstated to the extent that it's using New
8 Orleans rates for the entire state.

9 Q. I understand.

10 Okay. Now, do you also have a
11 Medicare?

12 A. Medicaid.

13 Q. Medicaid.

14 A. That was Medicare.

15 Q. Oh, care. Okay. Medicare. So
16 what's the Medicaid rate? Is there a big
17 difference between those two?

18 A. There's a substantial difference.

19 Q. All right. What's the different
20 number there?

21 A. The comparable number for
22 Medicaid -- and these are statewide rates --
23 would be a little over 161 million dollars.

24 Q. All right. Now, we're talking
25 about the same services; right?

1 A. Yes, sir.

2 Q. So how do you account for that big
3 difference in cost between --

4 A. Well, --

5 Q. I mean, that's -- gosh -- that's a
6 41 million dollar difference.

7 A. In payment.

8 Q. In payment now. That's not the
9 cost of service. That's what these programs
10 will pay you; right?

11 A. If I'm a provider of these services
12 and one of those programs' beneficiaries seeks
13 service from me, that is what I would receive
14 from those public programs.

15 Q. All right. Now, in fact, not every
16 healthcare provider accepts those payments;
17 right?

18 A. With respect to Medicare, virtually
19 every provider who provides services covered by
20 Medicare, in fact, participates in the Medicare
21 program.

22 Q. All right. So that nobody gets
23 rejected? I don't -- It doesn't matter who
24 you are, you go to a doctor, you give them your
25 Medicare card, they'll give you the service;

1 right?

2 A. The only -- That is a generally
3 true statement, yes.

4 Q. A generally true statement.

5 Now, and the way that -- And you
6 know this because you are in an institution
7 that has to deal with costs; right? Tulane,
8 that's where you are; right?

9 A. I'm sorry. I know this. What was
10 the "this"?

11 Q. You know the fact of the payments
12 by Medicare? I mean, you deal with that every
13 day, this business of whether Medicare will pay
14 the institution and so forth?

15 A. It's not because I -- my employer
16 is Tulane University, which happens to have a
17 segment of the university that participates in
18 the Medicare program; it's because I teach a
19 course in payment systems --

20 Q. Right.

21 A. -- that I am most familiar with
22 this. Not because I'm over at the hospital
23 looking over their shoulder at their checks
24 for Medicare.

25 Q. Oh, I was wrong. I thought that

1 you had something to do with that.

2 Well, so let me ask you this. Does
3 Medicare reimbursement cover the cost of the
4 service at Tulane?

5 A. Yes.

6 Q. Okay. Does the Medicaid payment
7 cover the cost of the service at Tulane?

8 A. Yes.

9 Q. Does it provide an appropriate
10 profit margin?

11 A. It depends on who you ask and what
12 you mean by "appropriate."

13 Q. Well, let's see. How do I tackle
14 that one then? Is Tulane satisfied with the
15 current Medicare reimbursement?

16 A. I think that if you ask any
17 provider, individual or institutional, in this
18 or any other state if they are happy with their
19 payments from Medicare, they would tell you
20 that they would like them to be higher, that
21 they're not happy.

22 Q. But they survive?

23 A. But they, in fact, participate in
24 the program, they deliver care, they get paid,
25 and they do it again next year.

1 Q. Well, and, in fact, they get more
2 money for the same services from insurance
3 reimbursements; right?

4 A. It depends on the insurance
5 reimbursement. Remembering that there are,
6 in this universe, 30 to 40 thousand --

7 Q. Different carriers?

8 A. -- different things that you can
9 get paid for, you know, clearly, there will be
10 some things that you will be paid more money
11 from most private insurance than you would be
12 paid from Medicare or Medicaid. But there are
13 ones that go the other way, too.

14 Q. Well, I mean, let's be straight
15 about it. If the institutions were required
16 to subsist on Medicare only, in other words,
17 that's their rate of reimbursement, if it was
18 across the board the same way, could they
19 survive?

20 A. Most institutions could survive.
21 There's data, for example, that shows what we
22 call Medicare margins, which is how much money
23 do you make on just your Medicare patients.

24 Q. Got you.

25 A. And for the vast majority of

1 hospitals, for example, in the United States,
2 those are positive numbers.

3 Q. Well, why is it not everybody?

4 A. The few that are negative Medicare
5 margin tend to be very small public hospitals
6 in rural areas --

7 Q. Rural areas?

8 A. -- in the midwest and far west.

9 Q. Okay. Would that translate into
10 the rural areas of this state as well or not?

11 A. Generally not.

12 Q. Okay.

13 A. In the Medicare program.

14 Q. Because we're populated enough in
15 Louisiana where you don't really get that kind
16 of rural, that is, the Wyoming kind of ten
17 people

18 A. Exactly.

19 Q. -- in 50 square miles kind of
20 rural?

21 A. Yeah, where you're talking about a
22 25-bed hospital.

23 Q. I understand.

24 Okay. Now, let's talk about the
25 Medicaid. Is that true of Medicaid as well?

1 Could the hospitals survive on the Medicaid
2 level of reimbursement if that's all they got?

3 A. In Louisiana, the answer is "Yes."
4 It is not necessarily true in every state.
5 Because Medicaid, as you know, differs state to
6 state in the definition of its programs, who's
7 in it, what's covered and what the payment
8 rates are.

9 Q. But not everybody -- Now, as I
10 understand Medicaid -- and I don't know this
11 stuff as well as you do, obviously -- but
12 Medicaid is a voluntary program?

13 A. It's voluntary for the state.

14 Q. Okay.

15 A. I mean, no state has to be in the
16 Medicaid program. So it's, first of all,
17 voluntary whether you have a Medicaid program
18 or not.

19 Q. But doesn't the provider have to
20 participate? I mean, he doesn't have to --
21 that is, the healthcare provider doesn't have
22 to provide health care to the Medicaid
23 recipient?

24 A. Again, depending on the state.

25 Q. How about here?

1 A. In Louisiana, you can choose to be
2 a Medicaid provider. If you choose to be a
3 Medicaid provider, then you have to take all
4 the Medicaid that show up.

5 Q. Right. You've got to take them
6 all. But as I understand it, you don't have
7 to be -- you don't have to choose to be a
8 Medicaid? You can say, "No, I'm sorry, I'm not
9 taking Medicaid -- period"?

10 A. That is legally permissible in
11 Louisiana.

12 Q. That's not true of Medicare; right?

13 A. Yes, that's true of Medicare as
14 well. No one has to be in the Medicare program
15 as a provider.

16 Q. Oh, I see.

17 A. You have to apply, you have to get
18 a provider number, you have to be licensed and
19 accredited and a whole bunch of other hoops to
20 jump through to get a provider number. You
21 don't have to do that.

22 Q. Okay. I got you.

23 Now, as an expert, would you choose
24 the 161 number or the 202 number or would you
25 blend it or average it to be -- to make sure

1 you had enough money to fund the program?

2 A. When you say --

3 (Whereupon a discussion was held off
4 the record.)

5 THE WITNESS:

6 When you say would I choose --

7 EXAMINATION BY MR. BRUNO:

8 Q. Yes.

9 I mean, you've chosen two numbers,
10 okay? You've got a Medicare number, you have
11 a Medicaid number. As an expert, which number
12 would you recommend? I mean, I'm not
13 suggesting the hundred percent participation
14 business. But, I mean, if you were down to
15 this point and the judge was going to say,
16 "Well, Doctor, what number should be my -- the
17 number in order for me to properly fund the
18 program so that it, you know, it works?"
19 Knowing that a year from now we can always
20 revisit and we can change these numbers?

21 A. Correct.

22 MR. STERN:

23 Well, just quickly for the record,
24 there are other things in the program that
25 Dr. Long isn't addressing.

1 But subject to that, go ahead.

2 EXAMINATION BY MR. BRUNO:

3 Q. And guess what? I wasn't asking
4 about the other things that you weren't
5 addressing. I was asking about what you were
6 addressing, which was the Medicaid/Medicare.
7 I mean, these are dramatically
8 different numbers. We're talking about 40
9 million dollars. It's a 25 percent difference.
10 So that's why I'm trying to figure out, you
11 know, what --

12 A. Twenty percent, actually.

13 Q. Oh, 20? Well, where I come from,
14 you know, you want to make it as big as
15 possible.

16 A. In part, it would depend on the
17 Court's philosophical construct of the program.
18 From an economic perspective, it would be my
19 recommendation to the Court that if these were
20 the volumes and these are the volumes only
21 if --

22 Q. They're assumptions. Right. We've
23 said that.

24 A. If we were talking about this kind
25 of -- this number of tests and we were talking

1 about buying them service by service, which is
2 what we're doing so far, then as an economist,
3 my position would be that whatever the program
4 entity is should get the benefit of the bargain
5 to deliver this volume of demand. And that the
6 economically appropriate funding would be that
7 amount of money which would be sufficient to
8 entice the producers of these services to sell
9 to the program with a sufficient margin or
10 contribution to keep them in the program.

11 Q. Right.

12 A. And it would be economically more
13 favorable for them to, in fact, deliver care to
14 these people than not to deliver care. That
15 number is, in my opinion, in Louisiana for
16 these tests something in the vicinity of the
17 Medicaid number because providers, in fact, as
18 we speak, are delivering these services to
19 Medicaid beneficiaries. And if they didn't
20 want to, they wouldn't have to.

21 Q. Right.

22 Well, it sounds to me, though, like
23 it could be a negotiated number.

24 A. Yes, it could.

25 Q. And it ought to be? Shouldn't it

1 be, really? I mean, we could --

2 A. One could negotiate it, one could
3 put it out for bid.

4 Q. Right.

5 A. I mean, there's a variety of
6 mechanisms that one could pursue. But,
7 basically, you're saying that some central
8 entity responsible for a monitoring program
9 would go into the marketplace in whatever form
10 and say, "We stand ready to deliver 'X' hundred
11 thousand physical exams or spirometries" or
12 whatever. "And we'll either sit down at the
13 table and negotiate with you or we will
14 piggyback on Medicaid rates or we will put it
15 out for competitive bid" or whatever.

16 But it would be somewhere in that
17 vicinity because the market's already telling
18 us that they'll do it for this.

19 Q. Well, it's a little bit different
20 market, though; isn't it? I mean, because
21 we're not talking about healthcare delivery in
22 the usual sense. In this particular instance,
23 we've got to keep track of the medical record
24 of the particular people so that it all
25 connects.

1 As I understand the program, you
2 have a physical examination at a certain age,
3 and then you've got something that may happen
4 five years later or ten years later, and all
5 those things have to connect together. So that
6 you just can't give the service and walk away
7 as you would do perhaps in certain
8 institutions. There's got to be a follow-up
9 record.

10 A. Well, I think we're segueing into
11 programmatic administrative costs here.

12 Q. Right.

13 Which are not in this?

14 A. Which are in this in the numbers
15 that I gave you over and above the costs of the
16 individual tests.

17 Q. All right. So what's the gross
18 number? You gave me a net? Did you give me
19 a number which included administration?

20 A. I gave you a number which included
21 administrative costs.

22 Q. All right. So I'm wondering,
23 though, whether or not that fact --
24 Administration is the person who's going to
25 have to collect the medical record and keep

1 it somewhere for the use of the subsequent
2 provider giving the test, given the appropriate
3 age?

4 A. (Witness nods head affirmatively.)

5 Q. The healthcare or the service
6 provider is going to have to access that
7 information and have it either delivered to
8 them or whatever in order to compare the
9 numbers or compare the information. Would
10 that add to the cost of the program?

11 A. Well, I think there are two kinds
12 of costs that you're actually alluding to. One
13 is administrative costs at the level of the
14 provider generating the paper, putting it in
15 the medical record, et cetera. Maybe not paper
16 anymore, maybe electronic.

17 Q. Maybe it's electronic.

18 A. Right. Whatever.

19 Q. But it's got to go to some central
20 depository somewhere.

21 A. So there is some cost to the
22 caregiver --

23 Q. Right.

24 A. -- of doing that. And that is
25 included in the per-test payment.

1 Q. All right.

2 A. Just as it would be for the
3 Medicaid or Medicare programs where similar
4 recordkeeping by -- at the level of the
5 provider has to happen.

6 In addition to that, there is a
7 programmatic administrative cost, which is the
8 maintaining of that information as well as
9 disbursing money to the caregivers --

10 Q. Well, yeah.

11 A. -- that is at the programmatic
12 level. And that is included in the numbers
13 that I gave you.

14 Q. But this is a different kind of a
15 program in that there is a need for some
16 centralized file or recordkeeping of each of
17 the participants, which is not usual; right?

18 I mean, Medicare or Medicaid, they
19 don't have some central repository of the
20 medical records of all the participants? It's
21 quite the opposite. Each healthcare provider
22 keeps their own medical record; right?

23 A. That's correct.

24 Q. All right. This is a little bit
25 different. You've got to have some central

1 repository of all of the participants' medical
2 records so that can be read?

3 A. Well, it's not clear to me that,
4 particularly in an age of electronic record-
5 keeping, that it's a central repository as
6 opposed to records which are accessible.

7 Q. That's even more cost.

8 A. Not necessarily.

9 Q. Well, just walk through it with me.

10 You know, at age 50, let's be
11 realistic, you know, the doc says it's time for
12 the CT and he wants to see about the physical
13 examination that took place at age 25 and maybe
14 the exercise stress test which took place at
15 this age or the cholesterol which took place at
16 age 30.

17 I mean, you know, I mean, he may
18 want to see all that stuff. And either, A.,
19 it's got to be in some central repository or,
20 B., he's got to go get it. Which, to me, it
21 would be more cost-effective to have some
22 central repository.

23 A. Well, that level of specificity of
24 the mechanics of the program is not something
25 that I've seen laid out by Dr. Burns or anyone

1 else at this point. I'm merely suggesting that
2 we have the technology in place now that,
3 subject to certain privacy constraints, that,
4 you know, Provider A can access the medical
5 records of Provider B with the appropriate
6 code.

7 Q. Right. Right.

8 A. And/or you can pull something up,
9 you know, over the Internet. And that that
10 technology, particularly if this program were
11 to go on a few years as, you know, plaintiffs
12 contemplate, is completely within the realm of
13 what we would expect to be done.

14 Q. Okay.

15 A. Particularly in a fairly
16 constrained geographic region for a defined
17 population.

18 Q. Right.

19 Now, given the fact that some
20 people may not accept these payments,
21 regardless of whether it's the Medicare or
22 Medicaid, if you were going to put in place
23 a program which was going to guarantee the
24 service, in other words, the person had the
25 right to the service regardless of its cost,

1 then wouldn't it make some sense to either
2 contract for or do something to make certain
3 that these prices were going to be acceptable
4 by the healthcare providers?

5 A. Yes.

6 Q. Okay. And your opinion is that,
7 well, Medicaid is paying this sum of money, so
8 it's likely that these healthcare providers
9 would pay -- I'm sorry -- accept the same
10 amount of money?

11 A. Or something in that vicinity.

12 Q. All right. Well, let me ask you a
13 really stupid question.

14 If Medicaid -- and I'm asking this
15 question as a taxpayer now -- but if Medicaid
16 is paying 41 million dollars less than
17 Medicare, why doesn't Medicare cut its
18 reimbursements to the Medicaid level?

19 I mean, I would. You just said,
20 man, get the bargain for the people here. And
21 since we're now, since it's April the 17th --

22 A. I think we have moved at this point
23 into a political question.

24 Q. Well, we're talking about the same
25 issues. It's provision of healthcare services.

1 It may be political. But if it's political,
2 it's going to be political for us, too.

3 A. Well, the Medicaid program rates
4 are set through a political process in this
5 state that occurs in Baton Rouge. Medicare
6 rates are set through a political process that
7 occurs in Washington D.C. Medicare rates,
8 although they vary geographically, spring off
9 of a base rate which is determined nationally.
10 And the politics of that rate
11 involve the American Medical Association,
12 specialty societies, hospitals, a whole variety
13 of national associations and large players.
14 And the dynamics of that are simply different.
15 The funding is different. It's a trust fund.
16 It's an entitlement. There's 39 million
17 beneficiaries --

18 Q. All right. Forgive me for stopping
19 you.

20 A. -- who have a lot of clout.

21 Q. Yeah, I don't mean to interrupt
22 you. But when you said it's a trust fund, it's
23 an entitlement, which one is which?

24 A. Medicare we're talking about.

25 Q. All right. Medicare is an

1 entitlement and it's a trust fund?

2 A. For most of the services that we're
3 talking about, right.

4 Q. Yeah.

5 Interestingly, so would this one.
6 This one would be a trust fund and it would be
7 an entitlement.

8 A. This one could meet those legal
9 definitions.

10 Q. Okay.

11 A. Medicaid, by contrast, is a program
12 which is generally labeled a welfare program
13 that, although it has to comply with certain
14 provisions of federal legislation in the
15 enabling statute, creates huge discretionary
16 options for each state, including payment.

17 The political clout of the people
18 who receive services in the Medicaid program is
19 very different than the political clout of
20 those who receive Medicare services. And for
21 that and a wide variety of other reasons, you
22 get significant rate differentials.

23 What's in common, however, is that
24 no program and for any substantial period of
25 time can pay providers less money than it costs

1 them to deliver the service or the program will
2 crash and burn.

3 Q. Okay. How many -- Do you have any
4 information about how much -- I'm trying to --
5 and I may not be articulately asking this
6 question -- but, you know, how many dollars are
7 paid through Medicaid in Louisiana versus how
8 many dollars are paid through Medicare?

9 A. I do have access to that informa-
10 tion, but I can't tell you off the top of my
11 head as I sit here.

12 Q. Is there a relationship between the
13 two? I mean, I don't need the precise numbers.
14 For example, is Medicare like three to one
15 Medicaid or twice, two to one or --

16 A. I would -- My recollection is that
17 the number of people covered in the programs is
18 relatively close in Louisiana. And based on
19 that, it would be my educated guess, as we sit
20 here, that Medicare would spend more money
21 because of the different characteristics of the
22 population in Medicare compared to Medicaid.

23 Q. Is there overlap?

24 A. There is.

25 Q. Yeah, I seem to recall that.

1 There's overlap meaning a person
2 could be a Medicare eligible person and, also,
3 a Medicaid eligible person?

4 A. Yes.

5 And I don't know that number in
6 Louisiana. But, nationally, there are about
7 five million people who are in both programs
8 simultaneously.

9 Q. Okay. All right. Now, the next
10 thing you did was you carved out or -- you
11 didn't carve it out -- you just got a different
12 method of providing the CT, that is, you bought
13 the equipment. So what number -- how does that
14 change your numbers, if it does at all?

15 A. Okay. Based on some things that
16 were in Dr. Burns' deposition where at one
17 point he suggests, you know, you may, when he's
18 talking about CT scanning, you may need to
19 designate some facilities and put particular
20 capacity, either fixed or mobile, in parts of
21 the state to -- where the population is --

22 Q. Right.

23 And, also, generate consistency in
24 reading the scans?

25 A. Yeah.

1 So what I did, based on that
2 proposal, was took a look at a range of scanner
3 capacity, how many scans can one scanner
4 produce, looked at the population of Louisiana
5 by what are called state planning districts,
6 which are geographic segments of the state,
7 and distributed scanners geographically,
8 proportionate to those population areas,
9 putting enough scanners in each district to,
10 in fact, deliver scans for the number of people
11 that Dr. Burns had suggested. And I did that
12 for a range of capacity, how many scans can you
13 do per hour.

14 I also looked at a range of
15 purchase prices for scanners, which was
16 consistent with what Dr. Burns testified to
17 and, also, my own independent investigation.

18 Q. All right.

19 A. And ran from five hundred thousand
20 dollars up to a million dollars of purchase
21 price for the scanners.

22 Q. All right. So just to clarify, in
23 the one instance where you did go out and check
24 Dr. Burns' numbers, they were right?

25 A. Yes.

1 What I found were purchase and
2 lease agreements with respect to spiral or
3 helical CT fell within that range that he had
4 opined to in his deposition.

5 Q. Okay. All right.

6 A. And I then took the other resources
7 in terms of staffing that were put forth in one
8 of the presentations at one of the Cornell
9 conferences that Dr. Burns had referenced, and
10 then added in some of the ordinary business
11 expenses of square footage and utilities and
12 insurance and the rest.

13 Q. The rent?

14 A. Yeah. The square footage is lease,
15 lease cost.

16 Q. Okay.

17 A. And that -- all those costs are
18 laid out on one of the spreadsheets.

19 Q. Okay.

20 A. Along with, you know, the technical
21 personnel that came out of the Cornell
22 presentation, the techs, clerical personnel who
23 would make appointments, keep track, put the
24 data in. Plus, employing radiologists to do
25 the reads based on the national average, the

1 number of images read by a radiologist, and put
2 all that in, and costed it out with Louisiana
3 costs.

4 Q. All right. Did you include
5 somebody to sit down with the patient and
6 explain the results?

7 A. It was my appreciation that if
8 there were results that needed to be explained,
9 that -- which I took to mean adverse results --

10 Q. Oh, I see.

11 A. -- that this would be referred to
12 someone who would be involved in a treatment or
13 a further diagnostic set of procedures. That
14 if we got a CT scan that gave us pause --

15 Q. Right.

16 A. -- an abnormality --

17 Q. Right.

18 A. -- that as I appreciated the
19 program, that person would then move into a
20 different set of services that might be other
21 diagnostic procedures, biopsy perhaps, or
22 treatment.

23 Q. Right.

24 A. Which is not covered by monitoring.

25 Q. All right. I'm with you.

1 I just don't understand how you --
2 There's got to be at least a cost for getting
3 them into that program. You got to tell them
4 something or tell them where to go or even a
5 letter.

6 A. Well, there may be such a cost.
7 But that's not one of the things that Dr. Burns
8 set out as a component of his program. So I
9 took his definition of the monitoring program.

10 Q. All right.

11 A. And, of course, that definition is
12 a moving target.

13 Q. I understand.

14 A. All right. So does that make the
15 numbers go up or down?

16 A. I'm sorry. Does what?

17 Q. Does that make your bottom line
18 numbers go up or down, the use of -- I'm sorry,
19 buying the equipment versus buying a service?

20 A. I have a range of costs associated
21 with purchasing and operating the scanners.
22 Let me back up and identify on the third page
23 of the spreadsheets, there is a line item which
24 specifies what just the CT scans would cost if
25 you bought them scan by scan.

1 Q. The service. So you would
2 eliminate that, obviously?

3 A. Right. So you back that out and
4 substitute this.

5 Q. And that's why I said does this
6 make the overall number go up or down?

7 A. It makes the overall number go
8 down. And, again, depending on the cost of the
9 scanner and the capacity. If everything else
10 is done at Medicare rates and you own and
11 operate the scanners, then the total cost
12 ranges anywhere from 100 to 124 million dollars
13 for a year.

14 That, by the way, loads the
15 purchase price, the entire purchase price
16 of the scanner into that year, even though
17 ordinarily the scanner would last several
18 years.

19 If everything else is purchased
20 at Medicaid rates, you own and operate the
21 scanners but you buy everything else at
22 Medicaid rates, it makes the numbers run
23 anywhere from 96 million to 120 million
24 dollars.

25 Q. All right. And that's for -- So

1 that includes all the other services on top of
2 the bought equipment?

3 A. Yes.

4 Q. Okay.

5 A. That's correct.

6 Q. All right. Okay.

7 A. That being at the hundred percent
8 participation.

9 Q. All right. Now, how do these
10 numbers differ from Dr. Burns' numbers?

11 A. Dr. Burns' numbers run -- And I
12 don't think we footed them separately on the
13 spreadsheet, so let me just see if my
14 recollection is correct quickly here.

15 Dr. Burns' numbers run
16 approximately 345 million dollars.

17 Q. Okay. So easily less than half?

18 A. Easily.

19 Q. Okay. All right. Now, what
20 happens when you go to the 35 percent? I mean,
21 obviously, you just cut it by 65 percent?

22 A. Approximately. There's some
23 differences because of fixed and variable
24 costs. You -- You know, a scanner has a
25 certain amount of capacity. In some parts of

1 the state, it may not be completely busy but
2 you got to have one there. There's not quite
3 enough population to keep it a hundred percent
4 occupied but you've got to have one.

5 Q. You've got to maintain it?

6 A. And you've got to maintain it.

7 Q. All right.

8 A. And so there are some things that
9 are not linear in this. But roughly
10 speaking

11 Q. Yeah.

12 A. -- you're talking about a
13 two-thirds reduction.

14 Q. If you have some concern about the
15 usage, then you probably ought not buy the
16 equipment, I would imagine, huh?

17 A. It depends on what percentage of
18 the capacity you're using. It would not make
19 sense to put a scanner out there and use it
20 three hours a week.

21 Q. Right.

22 A. But that doesn't mean you got to
23 use it 50 hours a week.

24 Q. Right.

25 So in the urban areas, it might

1 make sense to buy it; but in the rural or more
2 rural areas, it might make sense to buy the
3 service?

4 A. What we did for this analysis was
5 where -- Let me give you an example. In --
6 Well, generically, we have two adjacent
7 planning districts. And doing the arithmetic,
8 one planning district needs 1.3 scanners and
9 the one next to it needs 1.3 scanners.

10 Well, you don't put two in each
11 place. You put one in each place and then you
12 have a mobile scanner. That, as Dr. Burns
13 suggests, it spends half the week or one week
14 here and one week over there.

15 Q. Right.

16 A. So you get pretty close to having
17 capacity. And if you do that, then the
18 purchasing is the lower cost alternative.

19 Q. Okay. All right. So what's the
20 difference in the numbers?

21 A. Okay. For buying the scans, not
22 buying the scanners, in other words --

23 Q. Just like we did last time.

24 A. -- back to the original numbers --

25 Q. Yeah. Medicare?

1 A. -- Medicare would be about 71
2 million dollars.

3 Q. Okay.

4 A. Medicaid, about 57 million dollars.

5 Q. Okay. And then buying --

6 MR. STERN:

7 I'm sorry. This is at which
8 participation rate?

9 THE WITNESS:

10 Thirty-five percent.

11 MR. BRUNO:

12 Thirty-five percent.

13 MR. STERN:

14 Okay.

15 EXAMINATION BY MR. BRUNO:

16 Q. And then if you bought the
17 equipment?

18 A. And then if you bought the
19 equipment and bought everything else at
20 Medicare rates, it would range from 38
21 million to 46 million.

22 Q. Okay. Why is there -- Oh, that's
23 because you had ranges. I'm sorry.

24 A. That's because I have ranges in the
25 scanner.

1 Q. You had ranges before. Okay.

2 A. And if you bought everything else
3 at Medicaid rates, it would run from 36 million
4 to 45 million.

5 Q. Okay. All right. Now, why did you
6 undertake this exercise?

7 A. The purpose of this exercise was
8 to -- If one takes at face value Dr. Burns'
9 population and battery of tests at the
10 indicated ages and all of the rest, he had
11 indicated almost in passing in the first part
12 of his deposition that his \$328 price for a CT
13 scan had come from Medicare.

14 In the most recent part of his
15 deposition, he suggested that more than the CT
16 scan number was consistent with Medicare but
17 you could also look at Medicaid. When -- After
18 I got the first piece of the deposition, you
19 know, I popped in to the Medicare data and
20 didn't find \$328, in fact, found a number
21 substantially lower than that.

22 Q. Wait. What were you looking at,
23 though? I mean, a CT scan is not really --
24 hadn't been out there that long.

25 A. Medicare has a rate.

1 Q. They have a rate for the spiral CT?

2 A. For a CT scan without contrast,
3 which is what they currently pay -- If somebody
4 in New Orleans does a CT scan, a spiral CT scan
5 right now, Medicare will pay, you know, if it's
6 medically necessary, Medicare will pay for it,
7 then that's what they will pay for it. They
8 don't have one rate for a spiral and then a
9 different rate for whatever nonspiral is. But
10 they'll pay for it.

11 And maybe they should have a
12 different rate, maybe they will have a
13 different rate, but right now you get paid
14 to do one. And that's what they pay.

15 Q. Okay. So we don't -- we really
16 don't know about the difference between the
17 spiral and the nonspiral scan?

18 A. Yeah. But what I did find out, as
19 I did the purchase thing, is that the purchase
20 prices --

21 Q. Are the same?

22 A. -- are basically the same.

23 Q. Okay.

24 A. The staffing is about the same.

25 So it looks like, you know, if I

1 were advising Medicare based on what I found
2 in one state at this point, you know, I would
3 suggest to Medicare that it doesn't look to me
4 like they need a different rate.

5 Q. Right.

6 And you account for the difference
7 in the cost of buying the service versus the
8 cost of buying the equipment the profit that
9 these institutions derive?

10 A. There would be two components to
11 that difference: One would be the, what we
12 call, the cost of the capital or the
13 opportunity cost. Which if I am an independent
14 private organization and I've got to come up
15 with a million bucks to buy a scanner, then the
16 million bucks has to come from someplace.

17 And maybe I'll borrow it from the
18 bank or maybe I'll sell bonds or maybe, if I'm
19 a for-profit entity, I'll ask my shareholders
20 or partners to come up with the money. And
21 they're going to want a return on their
22 capital, not in the sense of profit, but for
23 the use of money because they could have taken
24 the same money and done something else.

25 Q. Right.

1 A. So part of it is a return on the
2 capital.

3 Q. Which we don't have --

4 A. Which is not necessary here.

5 Q. Which we won't have here --

6 A. Right.

7 Q. -- because it's being funded by
8 the --

9 A. Right.

10 Q. Okay.

11 A. And, in effect, that cost is --
12 still exists but it's borne by the people who
13 are doing the funding.

14 Q. I understand.

15 A. And, therefore, they don't have to
16 fund it a second time.

17 Q. Right.

18 A. The other component would be
19 margin, which might be called profit if you
20 were for profit and might be called excess of
21 revenues over expenses if you're nonprofit.

22 Q. I understand. I understand.

23 A. But it still serves an economic
24 purpose for the infinite life of the provider
25 organization, that is, a renewal of its assets,

1 provisions for new technology, inflation, all
2 the things why any ongoing institution needs a
3 margin, whatever you label it. And that would
4 be the second component.

5 Q. Okay. And, of course, there is no
6 margin in your numbers?

7 A. That's correct.

8 Q. All right. So --

9 A. Because this is, you know, assuming
10 a year at a time. And if you need more money
11 next year because more people participated or
12 because the technology changed, then there's
13 more money next year. And if it's the other
14 way, there's less money next year.

15 Q. How do your numbers compare, that
16 is, when you compare the cost of the service
17 with the cost of the equipment? We didn't do
18 that analysis.

19 A. I'm sorry.

20 Q. Under Medicare utilizing the
21 hundred percent, what was the number that you
22 did back out of that 202 million?

23 A. I'm sorry. I'm not following your
24 question.

25 Q. All right. Well, we took out the

1 cost of the CT service --

2 A. Right. Yes.

3 Q. -- and plugged into it the cost
4 of the equipment. So what was your Medicare
5 service number for CT?

6 A. For CT scans?

7 Q. Right.

8 A. Got you.

9 Q. In other words, I just wonder what
10 those two numbers, how those two compare and
11 contrast?

12 A. In other words, buying CT scans
13 versus service by service.

14 Q. Right. Versus the equipment.

15 A. In the hundred percent
16 participation was 126 million under Medicare
17 rates and 90 million under Medicaid rates.
18 And in the 35 percent, it was 44 million at
19 Medicare rates and 31.4 million at Medicaid
20 rates.

21 Q. So you don't really save that much
22 under the Medicaid rates but you save much more
23 under the Medicare rates?

24 A. I'm not sure what comparison you're
25 making.

1 Q. Well, it just occurred to me that
2 you were saving about 30 million using Medicare
3 rates.

4 A. Between what and what?

5 Q. In your hundred percent.

6 That is, I understand you to say or
7 understood you to say that about 120 million if
8 you bought the service using Medicare rates?
9 And then you saved about 30 million if you went
10 and bought the equipment?

11 A. No, no, I haven't --

12 MR. STERN:

13 He just gave the Medicare and
14 Medicaid comparison. You now want him to
15 give the buying the equipment comparison?

16 MR. BRUNO:

17 Well, that's what I was asking for.
18 That's why I got confused.

19 THE WITNESS:

20 Okay. I'm sorry. I got confused
21 then, too.

22 EXAMINATION BY MR. BRUNO:

23 Q. Yeah.

24 No, the whole deal was whether we
25 should go out and buy the equipment versus buy

1 the service, so I want to compare those two.

2 A. Okay. I think, I think I'm there.

3 MR. STERN:

4 Joe, correct me, what you now want
5 to ask Dr. Long is what does it cost --
6 what does one year cost for CT scans only
7 if you buy the equipment?

8 THE WITNESS:

9 Just CT scans?

10 MR. BRUNO:

11 Versus buying the service.

12 MR. STERN:

13 Right.

14 THE WITNESS:

15 Right. Okay.

16 EXAMINATION BY MR. BRUNO:

17 Q. I mean, that's our decision, so
18 let's compare apples to apples.

19 A. All right. Let me give you the
20 three numbers then.

21 Q. Okay.

22 A. At a hundred percent participation,
23 if I buy service by service under Medicare, 126
24 million. If I buy service by service, Medicaid
25 rates, 90 million. If I buy and operate the

1 scanners, somewhere between 25 and 49 million.

2 If we go to the 35 percent --

3 Q. All right. While we're there, so
4 that --

5 A. While we're where?

6 Q. Well, while we're there, what's
7 intriguing to me is that the margin and the
8 cost of the capital is 76 million dollars
9 under Medicare?

10 A. Providers are making a lot of
11 money --

12 Q. They're making, well, --

13 A. -- providing CT scans.

14 Q. Forgive my French, but they're
15 making a big pot of money providing CT scans?

16 A. Right.

17 Q. Seventy-two million dollars -- I'm
18 sorry, 75 million dollars.

19 A. For this number of scans -- If, if
20 there were a provider that was providing this
21 number of scans to Medicare patients.

22 Q. Right.

23 Of course, the more scans, the more
24 money they make?

25 A. Sure.

1 Q. So it's a little different deal,
2 but --

3 A. Right.

4 Q. All right. Let's look --

5 A. And the volumes we're talking about
6 here are much larger than we would see at any
7 typical provider currently.

8 Q. All right. So let's look at the 35
9 percent.

10 A. Okay. The comparable numbers, 35
11 percent bought service by service at Medicare
12 rates, about 44 million dollars. I'm rounding
13 here to the nearest million. The numbers are
14 on the sheets. Medicaid rates, service by
15 service, 31 million dollars. Buy and operate
16 the scanners, somewhere between 11 and 20
17 million dollars.

18 Q. So that's 24 million in margin and
19 capital costs against Medicare?

20 A. Medi -- Against Medicare, yes.

21 Q. Medicare.

22 And 11 million in Medicaid --

23 A. Yes.

24 Q. -- in profit or margin, if you
25 will?

1 A. (Witness nods head affirmatively.)
2 Medicaid is not an unattractive program for
3 many of the services that are covered.

4 Q. Okay. All right. Now, with regard
5 to Dr. Burns' exemplar monitoring program, what
6 did you learn in the, if anything, in the
7 deposition that allows you to additionally
8 critique the program?

9 A. Well, there were a variety of
10 things that came up over the three days of
11 transcripts that I reviewed that -- some of
12 which we've already alluded to here. One
13 was an explanation of the change through the
14 evolution of his drafts in participation rates.
15 And that, as I appreciated his testimony, that
16 his best judgment was the 35 percent
17 participation rate.

18 Q. Are you critiquing that?

19 A. And I believe that is a more
20 reasonable participation rate than the hundred
21 percent participation rate, as I think I
22 testified to last time.

23 Q. I know. But that's not the
24 question. The question is is that a good
25 rate -- period? Is that a fair number, 35

1 percent?

2 A. I honestly don't know.

3 Q. Well, sure, you work for the other
4 side and it's a lower number, I could say that
5 I like it, too.

6 I mean, as an expert witness, Doc,
7 come on, is that closer to the, you know, based
8 upon your expertise, the right number or is it
9 just a better number for your team?

10 A. No, it's a number that is more in
11 line with participation rates that I'm aware of
12 in other screening programs.

13 Q. Well, sure. No screening program
14 is at a hundred percent. We talked about that
15 last time.

16 A. Right.

17 Q. So to that extent, anything under a
18 hundred is going to be more in line.

19 A. Yeah.

20 I think, as Dr. Burns testified to,
21 this is pretty close to what has been seen in
22 Louisiana for mammography screening. It's a
23 little higher than what I saw with respect to
24 a black lung screening program. You know, I
25 don't have an independent judgment of

1 participation rates here. I can just say to
2 you what I've said.

3 Q. Okay. So where do we go to get
4 it? That is, the judgment with regard to
5 participation rates, who do we talk to?

6 A. Well, I think who you already
7 talked to.

8 Q. Dr. Burns?

9 A. Dr. Burns and the panel of
10 Louisiana doctors that he relied on.

11 Q. Okay. That's fair. That's fair.
12 Who are your colleagues?

13 A. Some of whom are my colleagues --

14 Q. All right.

15 A. -- some of whom are my competitors.

16 Q. That's right. Okay.

17 All right. Did you find any other
18 basis to criticize his population numbers, that
19 is, the gross numbers?

20 A. The -- In his program as it was
21 presented in his spreadsheets, which is
22 something that I avoided that difficulty by
23 here, you know, looking at a single year,
24 partially on the -- what the Court has
25 suggested that maybe that's how it would like

1 to proceed.

2 Q. Yeah.

3 A. But if one were looking at multiple
4 years, I noted in the deposition that Dr. Burns
5 acknowledged that he had not done the mortality
6 calculations correctly. So that beyond the
7 second year, his numbers are too big.

8 Q. Right. Yeah.

9 But just with regard to the year,
10 though, were there any other --

11 A. Well, with regard to the year, the
12 other things that we've already talked about --

13 Q. I think what you told me was if you
14 used the CPC data, then that would be
15 reasonable.

16 MR. STERN:

17 I don't think he was finished with
18 his answer.

19 A. CPC?

20 EXAMINATION BY MR. BRUNO:

21 Q. Yeah, the -- Is that what it's
22 called? I've got it right here. Current
23 Population Survey.

24 A. CPS.

25 Q. I'm sorry, CPS. That's what I

1 screwed up. CPS data, you haven't -- that's
2 the same opinion today, right?

3 A. Yeah, no change to what I talked
4 about before.

5 Q. Okay.

6 A. But understanding the comments that
7 we've made earlier today that although that may
8 be an estimate of persons with certain smoking
9 status, you know, we still have those other
10 legal questions that I gather are still to be
11 resolved.

12 Q. No, I guess I don't know what you
13 mean.

14 A. That we were talking about
15 causation and whether one might have smoked,
16 anyway, regardless of the tobacco company
17 behavior, et cetera.

18 Q. That sounds like something they
19 told you, though. I mean, if it's a defective
20 product, it doesn't matter why --

21 A. Well, like I say, I'm not going
22 there.

23 Q. I totally lose you when you say
24 that.

25 A. I'm not even going to go there.

1 Q. Because if it's a defective product
2 and then -- I mean, you know, we -- there's no
3 question but that cigarettes cause damage to
4 people; right? I mean, even the defendants
5 admit to that?

6 MR. STERN:

7 Well, let me just object to the
8 form.

9 EXAMINATION BY MR. BRUNO:

10 Q. Isn't that right? I mean, that's
11 what you understand to be the case with regard
12 to the use of cigarettes?

13 A. It's my understanding that
14 cigarettes pose significant health risks.

15 Q. All right. Well, that's all I'm
16 saying to you.

17 A. Yeah.

18 Q. So we don't need to get into all
19 this foolishness about the causation business.
20 I mean, if you're exposed to the smoke that
21 causes the risk, that's what the whole
22 monitoring program is all about.

23 A. Well, that's clearly what the
24 viability part of this case is, in large part,
25 about.

1 Q. Okay. Yeah.

2 A. And that's not part of my charge.

3 Q. Right.

4 Now, and as I said, so that if you
5 get over that hump, so now we're at the point
6 of, okay, you know, then the judge is looking
7 for help.

8 A. Then we have, as I appreciate it
9 from the deposition, the fact that he has not
10 done the crosswalk in regard to the monitoring
11 program of multiple risk factors. I think we
12 mentioned this briefly in the first deposition.
13 But how many of these smokers, in fact, have
14 the requisite second risk factor that would
15 make them eligible for certain of these tests
16 per his report. So that's another factor
17 that's in there.

18 Q. Wait. Didn't he calculate that?
19 I thought he did calculate that, actually.
20 Didn't he calculate half?

21 A. Half of what?

22 Q. Half the population, half the
23 smoking population. He used a .5.

24 A. Are you looking at a --

25 Q. I'm looking at his assumptions for

1 the screening program for the Scott class.

2 A. Uh-huh (indicating affirmatively).

3 Q. And he used a .5 instead of a 1 to
4 acknowledge the fact that not everybody in the
5 population is going to have other risk factors.
6 That's why you see a .5 there under frequency
7 per year.

8 A. Okay. I do not recall having seen
9 that answer in the deposition transcript.

10 Q. Well, we went through all those
11 numbers. The frequency numbers, for example,
12 you see there's a 1 under "Spirometry"?

13 A. I'm sorry.

14 Q. I'm sorry. My fault. Let me just
15 hand that to you. You see there's a 1 here
16 (indicating)? You see there's a .5 under
17 "Physical Exam"?

18 A. Well, that's frequency of testing
19 per year.

20 Q. Right.

21 A. Uh-huh (indicating affirmatively).
22 And this is once every two years, this is every
23 year.

24 Q. But down here, when you get to be
25 45, I think it's every --

1 A. Forty-five plus for males, 55 for
2 females, right. It's still every other year.

3 Q. Is it every other year? Okay.
4 That's my mistake then. I thought it was --
5 I thought that's where he built that in right
6 there.

7 A. But there could be something I'm
8 not remembering in the deposition testimony.

9 Q. Okay.

10 A. The other issue that comes through
11 in the deposition testimony, as I read it, is
12 that there is still substantial debate as to
13 the appropriateness of some of these tests, for
14 example, in the bladder cancer screening area,
15 which is medical opinion that --

16 Q. Which is not you?

17 A. Which is not me.

18 Q. You're not offering an opinion on
19 that but, obviously, it would affect the cost?

20 A. It affects the cost.

21 Q. Well, sure.

22 A. And the appropriate ages and all
23 those debates.

24 Q. Yeah. And we're not going there.

25 I mean, that's --

1 A. Right.

2 Q. We agree that that's for others. I
3 mean, --

4 A. Until those are settled questions,
5 then it makes it impossible to calculate
6 aggregate costs for the program.

7 Q. Well, but what we can agree on is
8 that these numbers are easily calculated once
9 you do know those answers? Because it's just
10 a matter of math?

11 MR. STERN:

12 Well, let me object to the extent
13 that Dr. Long has spoken to that quite a
14 bit today. But subject to that.

15 MR. BRUNO:

16 I don't know what that means, but --

17 MR. STERN:

18 Well, you've asked that question and
19 he's answered it. But go ahead.

20 EXAMINATION BY MR. BRUNO:

21 Q. I hadn't asked this question and
22 that's why I'm asking it now. I want to make
23 the point. Because you're making the point
24 that the NMP-22 may or may not be included.

25 And it's crystal clear to all of us

1 that if it's not to be counted, then you easily
2 just don't count it. But this whole business
3 of the cost of a program is when you distill
4 it, mathematics, the number of people times the
5 participation rate plus the cost per service?

6 A. Right. Right.

7 Q. So it is a number that is very
8 easily generated when these questions have been
9 answered, right?

10 A. When you know the number of people,
11 you know which tests, and you know at what age
12 they get them, et cetera, then you get into the
13 economics of the appropriate cost, which is
14 what we're approaching here, including
15 alternative ways of guaranteeing the services
16 to the persons entitled to them.

17 Q. Right.

18 A. Which can be buy them on the open
19 market, negotiate, make them yourself.

20 Q. Right.

21 A. And those have to be explored as
22 appropriate, given the volumes. That's one of
23 the things that hangs up the cost calculations
24 and the estimates are that if you tell me that
25 I actually only need this many (indicating) of

1 this service as opposed to this many
2 (indicating), it's going to change what I think
3 I can get them for per service.

4 Q. And that's exactly what Dr. Burns
5 testified to; isn't it?

6 A. He, indeed, acknowledged that
7 volume is an important factor --

8 Q. Right.

9 A. -- in deciding what per unit cost
10 you're going to be able to use. So it's more
11 than just arithmetic. Because depending on the
12 answers to those other questions will change
13 your cost numbers.

14 Q. But what he did say was that all of
15 these things may change, and that his proposal
16 was an exemplary program, and that the numbers
17 could be calculated? There wasn't this
18 business of it being impossible to do? It
19 simply was a matter of the Court or the jury or
20 whoever ultimately decides it indicating what
21 tests are going to be paid for and for what
22 ages, as you pointed out, and then the rest is
23 mathematics?

24 MR. STERN:

25 Objection to the form.

1 EXAMINATION BY MR. BRUNO:

2 Q. Isn't that true?

3 A. Well, I would point out that it's
4 not just mathematics to determine the unit
5 cost.

6 Q. It is mathematics once you've
7 determined the unit cost because, as you point
8 out --

9 A. Once you determine the unit cost.

10 Q. Yeah.

11 -- the larger the volume, the lower
12 your cost per unit of service? And, indeed,
13 the -- I'm sorry. The lower the volume, the
14 higher the cost; the greater the volume, the
15 lower the cost?

16 A. That, as a general proposition, is
17 correct.

18 Returning to your previous question
19 that we weren't quite finished with in terms of
20 other things in the context of the deposition,
21 of course, there was the change in the program
22 related to, I gather, new standards or new
23 information about the ability to read the scans
24 and not requiring follow-ups.

25 But there was also the concern

1 which came to me from the reading that just as
2 there had been lots of either mechanical or
3 conceptual areas in the spreadsheets, many of
4 which had to do with multiple years, which did
5 not generate in me a high level of confidence
6 in Dr. Burns' ability to manipulate spread-
7 sheets, there was also this notion of where
8 did these cost numbers come from?

9 And the one he had originally
10 specifically been asked about, he attributed to
11 Medicare. But Medicare has never paid that
12 amount of money, to my knowledge, for a CT scan
13 of any kind anywhere.

14 There's another place in his
15 deposition, I believe, where he says, "Well,
16 these were estimates of mine based on my
17 experience that I sort of put out there for the
18 Louisiana docs to give me feedback on." And
19 maybe they did or maybe they didn't, depending
20 on who you ask.

21 But, for example, spirometry, which
22 is one of the numbers -- one of the prices, I
23 think, \$60 that was on a very early draft of a
24 spreadsheet, the one, I think, from last April,
25 that he said is just an estimate that he put

1 out there for discussion purposes. When I get
2 to Volume III of his deposition, he says, you
3 know, "That's a number that I think Dr. Ochsner
4 gave me."

5 So I didn't come away with a sense
6 that Dr. Burns had really done any cost
7 investigation or cost analysis for this
8 program, at least through the termination of
9 his deposition; that he really hadn't figured
10 out what Medicare or Medicaid paid for these
11 things in Louisiana or anyplace else; that he
12 hadn't looked at, you know, what could we
13 produce the really high ticket items for as
14 opposed to what we would have to pay in the
15 open market. That he simply hadn't done a cost
16 analysis at this point.

17 Q. Well, what did you find to be the
18 costs? What was the cost of the physical exam?

19 A. The physical exam cost that we used
20 was, I believe, \$19.80 compared to \$75.00.

21 Q. All right. And the cardiovascular
22 screening with lipid subfractions?

23 A. The Medicare rate for that is
24 \$13.70. I'm sorry, the Medicare rate is
25 \$16.50. The Medicaid rate is \$13.70.

1 Q. All right. How about spirometry?

2 A. Medicare, \$35.79. Medicaid,
3 \$43.99.

4 Q. Cardiac exercise stress testing?

5 A. Medicare, \$110.57. Medicaid,
6 \$88.91.

7 Q. All right. And, let's see, spiral
8 CT?

9 A. Medicare, \$289.52. Medicaid,
10 \$206.13.

11 And I would want to put in the
12 record as a reminder that the Medicare rates
13 I'm quoting are New Orleans, not outside of
14 New Orleans, in Louisiana.

15 Q. All right. Urine test for
16 hematuria?

17 A. That was the urinalysis. Medicare,
18 \$4.37. Medicaid, \$3.71.

19 Q. All right. The NMP-22?

20 A. I could not find a Medicare or
21 Medicaid rate, so I simply used Dr. Burns' in
22 the absence of --

23 Q. It's 29.

24 A. -- being able to locate it, which
25 was \$29.

1 Q. Okay. And the urine cytology?

2 A. The urine cytology, the same as
3 NMP-22. I was unable in the time I had to
4 identify a separate code for that, so I used
5 Dr. Burns' rate.

6 Q. Of 41?

7 A. Forty-one.

8 Q. Okay. All right. Any other
9 criticisms of the method?

10 A. Actually, what I'm hearing you say
11 is that in terms of the source of information,
12 you think that the sources of his information
13 may be inaccurate. But in terms of the
14 methodology, it simply was multiplying it out?
15 So you have no critique of that?

16 A. In terms of --

17 Q. Multiplying?

18 A. -- his arithmetic of number of
19 people times this -- number of people at that
20 age times this test costs, you know, if one
21 took his cost, as nearly as I could tell, his
22 arithmetic for the single year was okay.

23 Q. Okay. All right. So in pure terms
24 of methodology, your method as would contrast
25 his method is really not different? You've

1 just chosen to use the Medicare/Medicaid
2 numbers versus his knowledge of what those
3 numbers may be? I'm sorry. His knowledge of
4 what those costs may be in the marketplace?

5 MR. STERN:

6 Well, let me just object to the form
7 to the extent that Dr. Long testified that
8 he used Dr. Burns' method. He just
9 corrected the costs. But subject to that.

10 MR. BRUNO:

11 Okay. If you want to stipulate
12 under Daubert that he's used the right
13 methodology, I'm happy to do that.

14 MR. STERN:

15 No.

16 MR. BRUNO:

17 Which is what you just did.

18 MR. STERN:

19 No. I'm just saying that Dr.

20 Long --

21 MR. BRUNO:

22 Well, you just did that.

23 MR. STERN:

24 No.

25 MR. BRUNO:

1 Yeah. I was trying to help you out
2 here.

3 MR. STERN:

4 No, Joe.

5 MR. BRUNO:

6 Daubert is strictly methodology.

7 MR. STERN:

8 Joe, maybe you didn't listen to me.

9 MR. BRUNO:

10 I listened to you very carefully.
11 You said he agreed with his methodology
12 and he disagreed --

13 MR. STERN:

14 I didn't say agreed.

15 MR. BRUNO:

16 Well, what did you say then?

17 MR. STERN:

18 I said --

19 MR. BRUNO:

20 We can read it back. What does he
21 say about methodology?

22 MR. STERN:

23 That he used his methodology, not
24 that he agreed with it. He used Dr.
25 Burns' approach. He just provided the

1 correct costs and made the corrections
2 that Dr. Burns himself said he needed to
3 make.

4 MR. BRUNO:

5 And I think we established the
6 methodology was just math. And that he
7 had no fault with the methodology.

8 Did I mis -- Did I not hear you?

9 MR. STERN:

10 Well, you have to define
11 "methodology" if you --

12 MR. BRUNO:

13 No, I don't have to define
14 "methodology." You've got to define
15 "methodology."

16 MR. STERN:

17 Then I have to object to the form.
18 I mean, does "methodology" include all
19 these things we've been talking about all
20 day?

21 MR. BRUNO:

22 Which is what I was asking about
23 before you interrupted.

24 MR. STERN:

25 Go ahead, ask your question. I'll

1 just object to the form.

2 MR. BRUNO:

3 Well, I don't know what you're
4 saying any more, Counselor. I mean,
5 you've lost me completely.

6 EXAMINATION BY MR. BRUNO:

7 Q. But when it comes to the
8 methodology, that is, the methodology employed
9 to get from the cost per unit to the total, the
10 math that Mr. Burns utilized was appropriate?

11 A. And now I'm confused. If you're
12 asking me did he do his multiplication of "A"
13 times "B" and get the correct product --

14 Q. Yes. Well, let's first establish
15 -- Forget about him. The methodology that he
16 employed, that is, multiplication, that was the
17 correct methodology?

18 A. Well, that is hardly a description
19 of his methodology. That is one mechanical
20 step that he took. And the numbers that he put
21 in, he multiplied together correctly --

22 Q. Right.

23 A. -- for that first year cost, as
24 nearly as I can tell.

25 Q. Right.

1 A. Okay.

2 Q. And the next point, which is what I
3 was alluding to, was that with regard to the
4 selection of the costs per unit, all right, in
5 terms of the methodology, your methodology and
6 Burns' methodology are different because you
7 chose to use the Medicare/Medicaid numbers; he
8 chose to use his own assessment of what those
9 services would cost? So there's a difference
10 in methodology there?

11 A. Well, there is clearly a difference
12 in methodology there. But I'm not sure that I
13 would agree with your characterization of his
14 methodology.

15 Q. Well, he'll be able to tell us what
16 he meant. I mean, --

17 A. Well, he's told us two things in
18 his deposition and I'm not sure which one --

19 Q. You say he told us two different
20 things. And I disagree with that.

21 A. Okay.

22 Q. My point to you is, though, that
23 when we first started this deposition, I asked
24 you specifically what he based those numbers
25 on. And I wrote it down. Your complaint was

1 that he used his own experience to get these
2 numbers. Now, clearly --

3 A. That was in the cessation part.

4 Q. Right.

5 With regard to your numbers, you
6 didn't choose to use your experience? You
7 chose to go out and look at what Medicare or
8 Medicaid utilized to reimburse for these
9 services?

10 A. And in the case of one service,
11 to purchase it.

12 Q. I understand.

13 But my point is that was a
14 difference in methodology?

15 A. Yes, it is.

16 Q. That's all I'm saying.

17 All right. And you cannot say that
18 it's inappropriate for a physician to utilize
19 his own knowledge of what these services may
20 cost in the marketplace; isn't that true?

21 A. I think there's a problem when he's
22 wrong.

23 Q. Well, that's -- Wrong about what?
24 You don't know if he's wrong.

25 A. Well, he said, for example, \$328 is

1 a Medicare rate. It isn't.

2 Q. Well, that's not what I'm talking
3 about. Because if he's reporting Medicare
4 rates, then it's a matter of a mistake. And
5 that the Medicare rate is the rate. As opposed
6 to his utilizing his own knowledge of what
7 these services cost. You can't say that that
8 is an inappropriate way to determine the cost
9 of services?

10 MR. STERN:

11 Object to the form.

12 A. If he, in fact, has that
13 knowledge --

14 EXAMINATION BY MR. BRUNO:

15 Q. Right.

16 A. -- that would be an alternative
17 approach.

18 Q. Yeah. And that's all I'm saying.

19 I mean, I guess the distinction
20 I'm making is that the guy says to you "I'm
21 using Medicare rates" and he chose the wrong
22 one, he made a mistake? But with regard to
23 methodology, you do have the same methodology
24 because you're using Medicare, he's using
25 Medicare, he just plugged in the wrong number?

1 So there's not a problem with the
2 methodology, there may have been a mistake in
3 its application, but the methodology is good if
4 both parties are using Medicare rates. You
5 follow me? That's the only point I was trying
6 to make.

7 A. Okay. And I would amend that in
8 terms of my methodology. It's not simply
9 saying, "Okay, I'm going to use Medicare
10 rates." It's saying, "Let me look at real
11 rates that are paid in high volume, dedicated
12 programs for defined populations and see what
13 they pay as a point of departure.

14 Q. As an interesting question then,
15 what did you do to determine real rates, that
16 is, what hospitals charge for these various
17 services? Did you check that out?

18 A. I did not. I can look at charge
19 master listings. Understanding that nobody
20 pays charges anymore, it's sort of an
21 irrelevancy.

22 Q. Well, did you look to see what
23 Tulane, for example, the institution where you
24 are -- with which you are associated, what they
25 charge for insurance reimbursements for these

1 same services?

2 A. I did not. But I happen to know
3 that basically no commercial insurance
4 companies or Blue Cross plans, et cetera, pay
5 what Tulane puts on the patient bill, which is
6 the charge. So even commercial insurance
7 companies don't pay charges.

8 Q. I understand that.

9 I didn't ask that. I said what
10 Tulane gets paid from these providers. In
11 other words, the actual dollars that change
12 hands --

13 A. No, I did not.

14 Q. -- between Tulane and --

15 A. The answer to your question is I
16 did not.

17 Q. Yeah. I mean, that's all I'm
18 saying.

19 All right. But the bottom line is
20 with regard to the provision of services, okay,
21 as a method, all these methods are good as long
22 as you are finding out, in fact, what the
23 provider is getting paid and what the willing
24 payer is willing to pay?

25 A. For a defined service and volume.

1 Q. Right, for a defined service.

2 A. Yes. Right.

3 Q. I mean, you don't want to pay a
4 number that you and I just made up and you
5 don't want to pay a number that's not going to
6 at least reimburse for the cost of the services
7 in the first place? You've got to go see what
8 the market has to say about it?

9 A. Yes.

10 MR. BRUNO:

11 All right. Okay. It must be 5:00
12 o'clock. It is 5:00 o'clock. All right.
13 I got to go. Let me see.

14 I think I've got it all covered but
15 I just, because I have to go now, I guess
16 if I have to get more time, I'll just
17 fight with counsel about it and not mess
18 with you.

19 THE WITNESS:

20 Thank you.

21 MR. BRUNO:

22 All right. Because I'm pretty sure
23 I got it covered. But I, in view of the
24 hour, I don't know that I have. But we'll
25 work it out. Okay?

1 MR. STERN:

2 Joe, I appreciate what you're
3 saying. Let me just state for the record,
4 we're --

5 MR. BRUNO:

6 It's for the record, I understand.

7 MR. STERN:

8 -- we would keep going if you wanted
9 to, but --

10 MR. BRUNO:

11 I understand. But I can't.

12 MR. STERN:

13 Okay.

14 MR. BRUNO:

15 And, you know, when we were doing
16 Dr. Burns, your boy couldn't keep going.
17 And I can give you five or six other
18 depositions where they couldn't keep
19 going.

20 I can give you my favorite example
21 which is at 2:00 o'clock the guy says he's
22 got one more question and at 5:20 he's
23 still going. I got an airplane at 5:35,
24 which I made in about two seconds.

25 So I appreciate the sentiment but it

1 just goes way over my head. All right.

2 THE VIDEOGRAPHER:

3 Going off the record at 5:05.

4 (Whereupon the deposition was
5 concluded at 5:05 o'clock p.m.)

WITNESS' CERTIFICATE

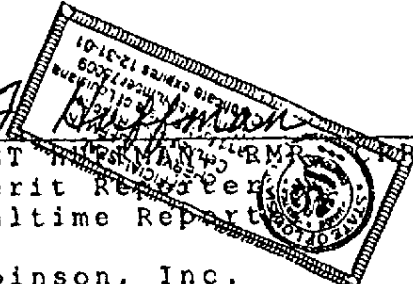

I have read or have had the foregoing testimony read to me and hereby certify that it is a true and correct transcription of my testimony, with the exception of any attached corrections or changes.

HUGH W. LONG, Ph.D.

REPORTER'S CERTIFICATE

1
2
3 I, CHERYL FOURNET HUFFMAN,
4 Registered Merit Reporter, in and for the State
5 of Louisiana, as the officer before whom this
6 testimony was taken, do hereby certify that
7 HUGH W. LONG, Ph.D., after having been duly
8 sworn by me upon authority of R.S. 37:2554,
9 did testify as hereinbefore set forth in the
10 foregoing 200 pages; that this testimony was
11 reported by me in the stenotype reporting
12 method, was prepared and transcribed by me or
13 under my personal direction and supervision,
14 and is a true and correct transcript to the
15 best of my ability and understanding; that I am
16 not related to counsel or to the parties
17 herein, nor am I otherwise interested in the
18 outcome of this matter.

Re: Gloria Scott, et al. v. The American Tobacco Company, et al.

Dear Bob:

Enclosed please find spreadsheets generated by Hugh Long, Ph.D. that are responsive to Dr. Burns' recent deposition testimony. We are also including electronic copies on the enclosed disk as well as Dr. Long's sources for the spreadsheets. In providing these, neither Defendants nor Dr. Long should be seen as accepting Dr. Burns' proposed medical monitoring program or setting forth any amount of damages that should be awarded in the event of a liability finding. On the contrary, Defendants' position is that the cost of the monitoring program is impossible to predict, in part because the identity of class members cannot even be determined.

The purpose of the spreadsheets, therefore, is only to show that even within Dr. Burns' own framework, the cost of the proposed monitoring program is much lower than that estimated by Dr. Burns. Thus, Dr. Long does not correct any of the many problems with Dr. Burns' approach that Defendants have set forth in various motions, including in the Daubert/Foret motion directed at Dr. Burns' testimony. Just for example, Dr. Long's spreadsheets do not address the fact that Dr. Burns' proposed program (1) assumes a participation rate that is far too high and which is impossible to predict; (2) would provide monitoring to class members who have not smoked enough to warrant any monitoring; (3) would provide monitoring to class members who have not shown that they were caused to smoke because of any allegedly tortious conduct on Defendants' part; and (4) would provide monitoring that does not meet the Bourgeois factors,

52434 8064

Adams and Reese, L.L.P.

Robert L. Redfearn, Sr., Esq.

4/5/01

Page 2

including, for example, spiral CT scans, even though every major public health organization has taken a position against using this procedure to monitor any segment of the population.

Rather than attempting to correct any of these problems, Dr. Long addresses Dr. Burns' estimate based on purchasing the proposed procedures. Thus, Dr. Long changes only those assumptions in Dr. Burns' spreadsheets that Dr. Burns has himself corrected or clarified in his very recent deposition. Accordingly, the cost of the proposed procedures is based on what Medicare and Medicaid charge because Dr. Burns testified that it was appropriate to look to these sources. Second, there is no charge for a follow-up CT scan because Dr. Burns testified that a follow-up CT scan is now unnecessary. Third, Dr. Long runs the spreadsheets not only with the 100% participation rate that Dr. Burns testified he was ultimately instructed to use by Plaintiffs' counsel, but also with a 35% participation rate that Dr. Burns testified that he himself felt was realistic. Then, after checking Dr. Burns estimate based on purchasing the proposed procedures, Dr. Long sets forth an alternative approach that, with respect to spiral CT scans only, is based on the cost of purchasing and running the required CT scanning machine.

We are furnishing the spreadsheets to Plaintiffs now so that you have them in ample time to prepare for the completion of Dr. Long's deposition, which is scheduled nearly two weeks from now on April 17, 2001.

Very truly yours,
ADAMS AND REESE LLP

CT SCANNER PURCHASE OPTION (100% Participation Rate)

Number of CT Scanners Purchased If Operating At:
 Minimum Capacity 34
 Mid-Range Capacity 28
 Maximum Capacity 23

Number of CT Scans in Year 1 434,951

Acquisition Cost of CT Scanner
 (Including Installation & Maintenance) \$500,000 \$750,000 \$1,000,000

Total Cost of Scanners Based on:
 Minimum Capacity 17,000,000 25,500,000 34,000,000
 Mid-Range Capacity 14,000,000 21,000,000 26,000,000
 Maximum Capacity 11,500,000 17,250,000 23,000,000

Scanner Operating Hours Per Year 3,350

Effective Hours of One Full Time Equivalent
 Employed Person (FTE)
 Gross Hours Per Year 2,080 Weeks 62 Hours/Week 40
 Less Estimated Time for Vacation,
 Holidays, Personal Time 168
 Net Hours Per Year 1,912

FTEs Required to Fill One
 Staff Position Per Scanner 1.75

Technologists
 - Average Annual Salary of 34,928
 - Benefits as a % of Annual Salary: 25.0% 8,732

Total Compensation Per Technologist 43,660

Number of Technologists Per Scanner 1.75
 Minimum Capacity 2,600,870
 Mid-Range Capacity 2,141,807
 Maximum Capacity 1,758,416

Clerical Workers
 - Average Annual Salary of 18,811
 - Benefits as a % of Annual Salary: 25.0% 4,678

Total Compensation Per Clerical Worker 23,489

Number of Clerical Workers Per Scanner 1.75

Total Cost of Clerical Workers
 Minimum Capacity 1,482,551
 Mid-Range Capacity 1,225,207
 Maximum Capacity 1,002,870

Radiologist
 - Estimated Number of Images Reviewed
 Per Year Per Radiologist 11,600
 - Estimated Number of Images To Be
 Reviewed Per Year 434,951
 - Number of Radiologists Needed 37.50
 - Average Radiologist Total Compensation
 (including bonus & incentives) 254,279
 Total Compensation for Radiologists 9,534,386
